

#### PROTECTION PRODUCTS - RailClamp®

#### Description

RailClamp® low capacitance TVS array designed to protect high speed data interfaces. This series has been specifically designed to protect sensitive components which are connected to data and transmission lines from overvoltage caused by **ESD** (electrostatic discharge), **CDE** (Cable Discharge Events), and **EFT** (electrical fast transients).

The unique design incorporates surge rated, low capacitance steering diodes and a TVS diode in a single package. This allows the device to absorb large amounts of energy while protecting downstream components from harmful transient events.

The RClamp®0504FA is in a 6-pin, SC-70 package. The leads are finished with lead-free matte tin. They may be used to meet the ESD immunity requirements of IEC 61000-4-2, Level 4 (15kV air, 8kV contact discharge). The combination of small size, low capacitance, and high ESD surge capability makes them ideal for use in applications such as USB 2.0, multimedia card, and video interfaces.

#### Features

- ◆ Transient protection for high-speed data lines to **IEC 61000-4-2 (ESD) ±15kV (air), ±8kV (contact) IEC 61000-4-4 (EFT) 40A (5/50ns)**
- ◆ Array of surge rated diodes with internal TVS Diode
- ◆ Small package (2.4 x 2.2mm) saves board space
- ◆ Protects up to four I/O lines & power line
- ◆ Low capacitance (**<3pF**) for high-speed interfaces
- ◆ No insertion loss to **2.0GHz**
- ◆ Low leakage current and clamping voltage
- ◆ Low operating voltage: 5.0V
- ◆ Solid-state silicon-avalanche technology

#### Mechanical Characteristics

- ◆ EIAJ SC-70 6L package
- ◆ Lead Finish: Matte Tin
- ◆ Pb-Free, Halogen Free, RoHS/WEEE Compliant
- ◆ Molding compound flammability rating: UL 94V-0
- ◆ Packaging : Tape and Reel

#### Applications

- ◆ USB 2.0
- ◆ USB OTG
- ◆ Monitors and Flat Panel Displays
- ◆ Digital Visual Interface (DVI)
- ◆ SIM Ports
- ◆ IEEE 1394 Firewire Ports

## PROTECTION PRODUCTS

### Absolute Maximum Rating

Rating	Symbol	Value	Units
Peak Pulse Power (tp = 8/20μs)	$P_{pk}$	150	Watts
Peak Pulse Current (tp = 8/20μs)	$I_{pp}$	6	A
ESD per IEC 61000-4-2 (Air) ESD per IEC 61000-4-2 (Contact)	$V_{ESD}$	15 8	kV
Operating Temperature	$T_J$	-55 to +125	°C
Storage Temperature	$T_{STG}$	-55 to +150	°C

### Electrical Characteristics (T=25°C)

Parameter	Symbol	Conditions	Minimum	Typical	Maximum	Units
Reverse Stand-Off Voltage	$V_{RWM}$	Pin 5 to 2			5	V
Reverse Breakdown Voltage	$V_{BR}$	$I_t = 1mA$ Pin 5 to 2	6			V
Reverse Leakage Current	$I_R$	$V_{RWM} = 5V, T=25°C$ Pin 5 to 2			3	μA
Clamping Voltage	$V_C$	$I_{pp} = 1A, tp = 8/20μs$ Any pin to pin 2			15	V
Clamping Voltage	$V_C$	$I_{pp} = 6A, tp = 8/20μs$ Any pin to pin 2			25	V
Junction Capacitance	$C_j$	$V_R = 0V, f = 1MHz$ Any I/O pin to pin 2			3	pF
		$V_R = 0V, f = 1MHz$ Between I/O pins			1.5	pF

Note 1: I/O pins are pin 1, 3, 4, and 6

## PROTECTION PRODUCTS

### Typical Characteristics

#### Non-Repetitive Peak Pulse Power vs. Pulse Time

#### Power Derating Curve

#### Pulse Waveform

#### Clamping Voltage vs. Peak Pulse Current

#### Forward Voltage vs. peak Pulse Current

#### Capacitance vs. Reverse Voltage (Normalized to 0V)

PROTECTION PRODUCTS

Typical Characteristics

Insertion Loss S21 (I/O to Pin 2)

Insertion Loss S21 (I/O to I/O)

Analog Crosstalk

ESD Response (8kV Contact per IEC 61000-4-2)

Note: Data is taken with a 10x attenuator

## PROTECTION PRODUCTS

### Applications Information

#### Device Connection Options for Protection of Four High-Speed Data Lines

This device is designed to protect data lines by clamping them to a fixed reference. When the voltage on the protected line exceeds the reference voltage the steering diodes are forward biased, conducting the transient current away from the sensitive circuitry. Data lines are connected at pins 1, 3, 4 and 6. Pin 2 should be connected directly to a ground plane. The path length is kept as short as possible to minimize parasitic inductance.

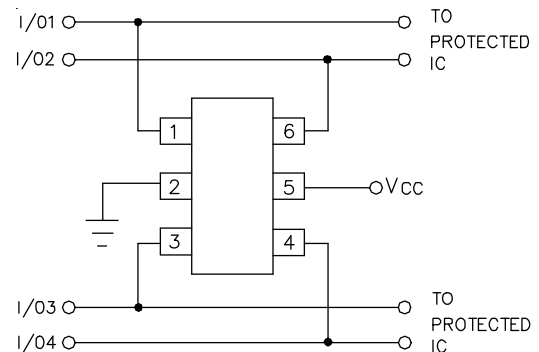

The positive reference is connected at pin 5. The options for connecting the positive reference are as follows:

1. To protect data lines and the power line, connect pin 5 directly to the positive supply rail ( $V_{CC}$ ). In this configuration the data lines are referenced to the supply voltage. The internal TVS diode prevents over-voltage on the supply rail.
2. In applications where the supply rail does not exit the system, the internal TVS may be used as the reference. In this case, pin 5 is not connected. The steering diodes will begin to conduct when the voltage on the protected line exceeds the working voltage of the TVS (plus one diode drop).
3. In applications where complete supply isolation is desired, the internal TVS is again used as the reference and  $V_{CC}$  is connected to one of the I/O inputs. An example of this configuration is the protection of a SIM port. The Clock, Reset, I/O, and VCC lines are connected at pins 1, 3, 4, and 6. Pin 2 is connected to ground and pin 5 is not connected.

#### Matte Tin Lead Finish

Matte tin has become the industry standard lead-free replacement for SnPb lead finishes. A matte tin finish is composed of 100% tin solder with large grains. Since the solder volume on the leads is small compared to the solder paste volume that is placed on the land pattern of the PCB, the reflow profile will be determined by the requirements of the solder paste. Therefore, these devices are compatible with both lead-free and SnPb assembly techniques. In addition, unlike other lead-free compositions, matte tin does not have any added alloys that can cause degradation of the solder joint.

#### Protection of Four Data Lines and Power Supply Line

#### Protection of Four Data Lines Using Internal TVS Diode as Reference

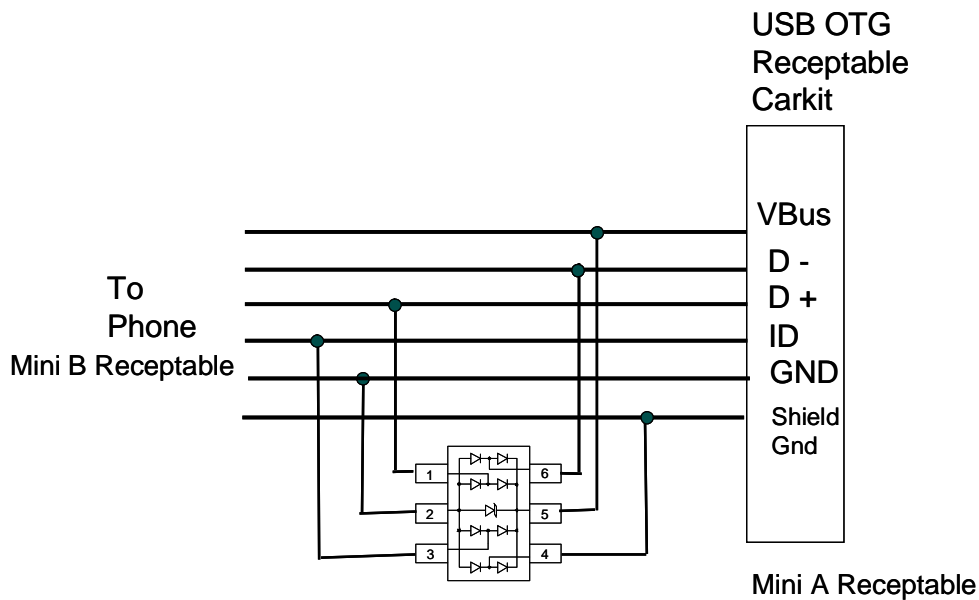

**PROTECTION PRODUCTS**

**Typical Applications**

**SIM Port - Protection of Three Data Lines and VCC**

**USB OTG CarKit Protection**
