Conduits, Fittings & Accessories for
Hazardous and Hostile Areas

Welcome to Thomas & Betts

At Thomas & Betts, our focus is on improving your business performance by providing practical, reliable electrical products & services. To connect & protect for life. To solve everyday problems in the area's of Wire & Cable Management, Cable Protection, Power Connection & Control and Safety. Our extensive engineering, supply chain management and technical sales support teams are committed to understanding everything that impacts your ability to accomplish your business objectives by reducing your total cost of ownership.

Whether you are designing, installing, operating, maintaining or owning an office building, off-shore platform, hospital, or a high speed train, power generating plant, machine equipment or a manufacturing facility, Thomas & Betts engineered products fit and function in your application while providing superior performance, sustainability, and value throughout the project life cycle.

All our brands are built upon four product & service solution platforms. Platforms that address you or your customers' critical electrical & lighting needs covering the protection of data, energy, processes, assets and personal safety. Beyond hi-performance application characteristics, Thomas & Betts products, information and services facilitate and speed up your time critical assembly, installation or maintenance process.

Oil & Gas - Upstream Applications

Industry Overview

The oil and gas market is split into three sectors Upstream, Midstream and Downstream. Upstream consists of Exploration and production both these areas offer very distinct and unique challenges to people and equipment working within them.

Firstly there are offshore applications such as the drilling rigs and production platforms; these are always open to extreme weather conditions so equipment used here needs to be able to withstand a salty environment. This is achieved through either manufacturing product from stainless steel as is the case for the Kopex-Ex conduit glands, and DTS enclosures, or by ensuring that the product is coated or painted to withstand marine environments as in the DTS XFF fluorescent lighting.

Equipment in offshore applications also needs to be hardwearing and easy to maintain as production downtime can be extremely costly for example FPSO (Floating Production Storage and Offloading) vessel can produce up to 200,000 barrels of crude oil per day at approx \$80 to \$90 per barrel. A breakdown would result in the vessel producing a loss of revenue of over \$700,000 per hour.

Approvals / Characteristics

Product Selection

- Salt water corrosion (offshore platforms)
- Oil and chemical resistance (Drilling rig MUD)
- Extreme ambient temperature
- Protection level
- Connectivity to other pieces of equipment
- Consequence of down time
- Approval level required (Ex e, Ex d, etc.)
- Approval specification required ATEX, IECEx, UL, GOST, etc.
- Where product will be positioned, e.g. Zone 1 or Zone 2

This has led to Kopex-Ex conduit systems being used in many offshore applications to protect critical data and power cables across these massive vessels, whether it is data cables from a gas detector or the cable protection on a power transmission unit, Kopex-Ex offers a whole range of products that are tested and approved to many of the world standards.

DTS lighting on the other hand offers easy maintenance with removable gear trays allowing the maintenance to be carried out quickly and safely. In fact on the XFF Exd luminaries the components such as ballasts and tubes are standard so the stocking and sourcing of spare parts is made easy. Again essential to an offshore vessel.

Onshore applications can also be split into exploration and production. However onshore is more economically viable than offshore with some wells only producing as few as a dozen barrels of oil a day. However, they can become extremely large with wells being networked together to produce up to a million barrels of oil a day.

This brings with it a whole new series of challenges to be overcome. Firstly the drilling rigs tend to be mobile with motors and pumps often mounted on skids for easy transportation. This can lead to issues of connectivity for which Kopex-Ex have a range of thread converters in a variety of materials and approvals ready to resolve the problem.

Secondly with so many rigs in network there is a massive monitoring operation to be done to ensure that the flow of all the rigs is ongoing and consistent. This is where the DTS range of instrumentation boxes can offer great flexibility as they can be custom made to meet exact specifications.

The need to maintain flow also leads to the need for motors and controls on the well heads themselves often referred to as "Christmas Trees." These are under high pressure and must be able to withstand up to 1400 bar this is a critical area and has to be monitored closely to ensure that pressure do not fluctuate this is done by the valves within the wellhead controlled by motors. DTS EJB enclosures can be custom built to control these valves and at the same time monitor the pressures and relay it back to the central control point.

Oil & Gas - Midstream Applications

Industry Overview

Midstream relates to the transportation, storage and partial processing of crude oil and gas from the wellheads to the refining plants. This brings a different set of challenges to overcome.

This all relates to the fact that what is pumped out of the well is not pure and often contains a mixture of oil, gas, water and often sand which firstly need to be separated off from each other before being shipped or piped to a storage facility.

This can be done in a variety of ways depending on the type of oil or gas that the well is pumping and can often take up to 4 processes before the commodity is separated out ready for piping or shipping. These processes require energy and this energy is often created from the commodity itself by the utilization of the gas.

Once the separating has been completed, the commodity can then be moved to storage. In the case of an offshore rig this separating is often done on shore away from the rig then pumped to the storage depots. In the case of the FPSO vessels it is all done on board and the oil transferred to tankers at sea for delivery to storage depots.

Approvals / Characteristics

Product Selection

- Salt water corrosion (Tankers)
- Extreme ambient temperature
- Protection level
- Consequence of down time
- Approval level required (Ex e, Ex d, etc.)
- Approval specification required ATEX, IECEx, UL, GOST etc
- Where product will be positioned, e.g. Zone 1 or Zone 2

This is also the point when all metering needs to take place to calculate invoices and taxes today. This is done very accurately measuring not only the amount of oil produced but also the density, viscosity, pressure and temperature, and in the case of gas, the amount of water vapour.

Oil is often pumped direct to the oil refinery which is where the down stream operation starts but often needs to go through a series of pumps to get the required pressure.

With DTS and the Kopex-Ex range of products, Thomas & Betts can offer a range of products and services to meet the demands of midstream oil and gas markets. The DTS range of lighting products is manufactured to meet ATEX and IECEx standards. Designed to be robust to meet the vigors of the environment whether it is on oil tankers where the XFF product is ideal. To storage depots where the EVS range of fluorescents is often preferred. Added to this all the fluorescent lighting has been designed with the installer and maintenance people in mind with removable gear trays for easy and safe installation and maintenance.

DTS also offers a wide range of standard and custom made instrumentation boxes often used in the monitoring equipment to relay signals from the sensors back to the central control systems. As well as a range of standard configuration for control boxes including "Emergency Stop" and "On - Off" to control motors etc. All of these are available in GRP, aluminum and Stainless steel 316 therefore meeting any environmental requirement.

Kopex-Ex conduits are used in many applications including to protect the critical data cables feeding the information from sensors to the instrumentation boxes as well as being used on the compressors protecting the wiring where temperatures can reach over 100°C.

Oil & Gas - Downstream Applications

Industry Overview

The term downstream relates to the processing and delivery of finished carbon related product to the end-user. This covers a whole range of applications from refining to petrol stations.

There are over 700 refineries globally all competing to supply finished carbon based products to local and international markets. The products refined are varied including:

- **Transportation fuels**
LPG, gasoline, jet fuel, diesel, gas oil and bunker fuel.
- **Petrochemical feedstocks**
LPG, naphtha and aromatics.
- **Energy sources**
LPG, kerosene, heating oil and fuel oil.
- **Specialities**
Lubricants, bitumen, coke, solvents and waxes.
- **Petrochemical feedstocks**
Synthetic fibres (nylon), plastics (polyethylene, PVC).

Approvals / Characteristics

Product Selection

- Continual Movement (CCTV)
- Extreme ambient temperature
- Protection level
- Consequence of down time
- Approval level required (Ex e, Ex d, etc.)
- Approval specification required ATEX, IECEx, UL, GOST, etc.
- Where product will be positioned, e.g. Zone 1 or Zone 2

The refining process is in four stages, firstly distillation which separates it into 5 product sectors LPG, Naphtha, Kerosine, Gas, Oil, and Atmospheric residue, this is done using high temperature. The higher the temperature the higher the quality of the product.

The second stage is the upgrading or reforming. This stage is used to change the product at a molecular level for example changing the low octane version of Naphtha to high octane which can be blended into gasoline.

Stages three and four are about treating the product to remove impurities such as sulphur and blending the refined product into distinct products for the market.

The final stage of the downstream process is delivery to the market which involves storage and transportation. For example in the case of aviation fuel this can be shipped direct to airports by road or rail where it is stored, before transferring to tanker trucks for the refuelling of aircraft.

All the stages in the downstream operation have different requirements to ensure safety of personnel and the quality of the end product. DTS and Kopex-Ex products are both used in this area whether it is the XF floodlight range or EVS fluorescent range. They are all designed for easy maintenance. There is also a range of instrumentation boxes either with standard configurations or custom made to end-user requirements, all of which are essential within a refinery where sensors play a key part on the process to ensure quality.

Kopex-Ex also plays a key part within the downstream market. It is not just used to protect the sensor cables but also for security on CCTV all the way through to the cable protection on rail tankers and tanker trucks.

Food & Beverage Applications

Food Manufacture - Explosion Proof (Dust)

Food Industry

Thomas & Betts offer a range of products for the food processing market, including products for use in areas where stainless steel is preferred as well as areas classed as hazardous. Thomas & Betts can offer stainless steel control stations for use on automated food processing and packaging machines as well as lighting specifically designed for use in dust filled atmospheres such as flour mills or other places where the risk of explosion is considered to be extremely high.

Beverage Manufacture - Explosion Proof (Vapour)

Beverage Industry

Thomas & Betts has a range of products designed for use in all beverage production sectors in the malting, brewing, wine, spirits or soft drink business. DTS can supply lighting products to suit the needs of hazardous areas where explosive gases may occur or in areas where cleanliness is required.

Chemical & Pharmaceutical Applications

Chemical Engineering - Explosion Proof

Chemical Industry

The chemical industry produces very diverse products, everything from fertilizers to explosives such as nitroglycerin. The processes used in this industry mean that there are lots of applications for the DTS lighting and box ranges. DTS can offer standard or custom built products, whether it is for a process control station or for instrumentation boxes linking sensors back to central control panels.

Pharmaceutical Production - Explosion Proof

Pharmaceutical Industry

The Thomas & Betts range of products and solutions are ideal for use in the pharmaceutical Industry. Whether it is upstream in the primary production stage or downstream in the packing stage. Many of the processes and applications used in these areas require approvals to hazardous area standards making stainless steel junction and control boxes ideal.

World Standards and what they mean

Standards and what they mean

In this Section we will outline the different Standards used throughout the world and what it means for products specified for use in Hazardous Areas. Below is a map of the world which illustrates the Standards that are generally used in these regions.

GROUPS & ZONES

The ATEX Europe Directives 94/9/EC

ATEX requires employers to eliminate or control risks from dangerous substances and to classify areas where explosive atmospheres may occur into zones, as laid down in regulations. ATEX Directives are designed to protect employees, the public and the environment from accidents owing to explosive atmospheres and since July 1st 2006 all existing sites, as well as new sites, must be fully ATEX compliant.

Directive ATEX100a applies to equipment suppliers and manufacturers and ATEX137 applies to end users. These directives compliment each other, but have different purposes. ATEX100A covers both electrical and non-electrical products intended for use in hazardous areas, including mechanical equipment. The Directive came into existence in 2003 and products sold within the European Union designed for use in hazardous areas must have ATEX certification and bear the

ATEX marking on the product or on a certificate plate. The obligation is placed upon the manufacturer or supplier of the product and the intention is to facilitate free movement of goods within the EU.

Declaration of Conformance

This has to be issued by the supplier for every order which is to be installed in a hazardous area. This document has to show that the equipment supplied complies with the latest harmonized standard.

IECEx (International Scheme)

The IECEx scheme is an international certificate of conformance for products used in a hazardous area.

This scheme provides:

- a) A single certification of conformity for manufacturers to comply that includes:
 - i) Testing and assessment of products to a standard including a full test report.
 - ii) Ongoing surveillance of manufacturers premises.
- b) A fast-track process for countries where regulations still require the issuing of national Ex certificates or approvals.

This scheme is in the process of being adopted by all the known standards across the world but are all working to various time scales.

UL (America) & CSA (Canada)

The American and Canadian standards are the only ones to have different classifications and locations. ATEX & IECEx work to Groups and Zones whereas the NEC & CEC works to Classes and Divisions, there is no direct comparison between the two. This means that it is imperative that the two standards are not inter-changed within an area.

GOST (Russia)

GOST follows similar rules to that of IECEx as far as the breakdown of the zones and other criteria are concerned. However, the requirements for this country mean that separate GOST markings are required on the product.

GOST is divided into GOST (R) which is the standard for Russian Federation and GOST (K) that cover Kazakhstan.

Electrical materials for use in potentially explosive atmospheres must conform to two major certification standards: IEC/CENELEC and NEC

The IEC (International Electrotechnical Commission) standards are accepted in practically all countries. They are identical to the European CENELEC standards.

The NEC (National Electrical Code) is mandatory in the United States. The 1996 version, art. 505, takes up the IEC designations for gas, temperature classes for materials and zone definition.

Gases and vapours classification

Gases are divided into four groups in the NEC (National Electrical Code) and three groups for IEC/CENELEC. The groups display the same hierarchy of classification of gases and vapour. (See table on page 20).

Temperature classification

The IEC and the NEC have also defined a temperature classification for material used in zones at risk of explosion. (See table on page 21).

Zone Definitions Onshore Gases & Vapours (as per ATEX 60079-10)

Zones for Onshore Gases & Vapours

FOR GASES & VAPOURS

ZONE 0

Permanent / Frequent

Place in which an explosive atmosphere consisting of a mixture with air of flammable substances in the form of gas, vapour or mist is present continuously or for long periods, or frequently.

ZONE 1

Occasional

Site where an atmosphere consisting of a mixture of air and inflammable substances in the form of gas, vapour or mist is likely to arise occasionally during normal operation.

SAFETY ZONE — —
Low Explosion Risk

ZONE 2

ZONE 2 — —
Gas Irregular / Short Duration

Place in which an explosive atmosphere consisting of a mixture with air of flammable substances in the form of gas, vapour or mist is not likely to occur in normal operation but, if it does occur, will persist for a short period only.

Zone Definitions Offshore Gases & Vapours (as per ATEX 60079-10)

Zones for Offshore Gases & Vapours

FOR GASES & VAPOURS

ZONE 0

Permanent / Frequent

Place in which an explosive atmosphere consisting of a mixture with air of flammable substances in the form of gas, vapour or mist is present continuously or for long periods, or frequently.

SAFETY ZONE

Low Explosion Risk

ZONE 1

Occasional

Site where an atmosphere consisting of a mixture of air and inflammable substances in the form of gas, vapour or mist is likely to arise occasionally during normal operation.

ZONE 2

Gas Irregular / Short Duration

Place in which an explosive atmosphere consisting of a mixture with air of flammable substances in the form of gas, vapour or mist is not likely to occur in normal operation but, if it does occur, will persist for a short period only.

Zone Definitions Dust (as per ATEX 60079)

Zones for Dust

FOR DUST

ZONE 20

ZONE 20 ———
Permanent / Frequent

Area in which an explosive atmosphere in the form of a cloud of combustible dust in air is present continuously, or for long periods, or frequently.

SAFETY ZONE ———
No Explosion Risk

ZONE 21

ZONE 21 ———
Occasional

Area in which an explosive atmosphere, in the form of a cloud of combustible dust in air is likely to occur, occasionally, in normal operation, occasionally.

ZONE 22

ZONE 22 ———
Dust Irregular / Short Duration

Area in which an explosive atmosphere, in the form of a cloud of combustible dust in air is not likely to occur in normal operation but, if it does occur, will persist for a short period only.

New Marking - EPL's (Explosion Protection Levels)

The introduction of the EPL's and changes in the EN 60079 series standard has introduced new marking requirements.

Index of Ingress Protection

IPxx suitability ratings are a system for classifying the degree of protection provided by enclosures of electrical equipment. The higher the number, the greater the degree of protection, in accordance with standards IEC 60529 and EN 60529.

Protection standards

- Protection against solid bodies
- Protection against liquids
- Protection against impact a per EN 50102 standard

Protection against Solid Bodies		
	0	No protection
	1	Protected against solid bodies of 50mm and greater, (e.g. accidental contact with the hand)
	2	Protected against solid bodies of 12.5mm and greater, (e.g. accidental touch by fingers)
	3	Protected against solid bodies of 2.5mm and greater, (e.g. tools and wires)
	4	Protected against solid bodies of 1mm or greater, (e.g. thin tools and fine wires)
	5	Protected against dust - limited ingress (no harmful deposits)
	6	Totally protected against dust (Dust-tight)

Protection against Liquids		
	0	No protection
	1	Protected against vertically falling drops of water (condensation)
	2	Protected against drops of water falling up to 15° from the vertical
	3	Protected against drops of water falling up to 60° from the vertical
	4	Protected against splashing water from all directions
	5	Protection against jets of water from all directions
	6	Protection against powerful jets of water from all directions
	7	Protected against the effects of temporary immersion in water
	8	Protected against the continuous effects of immersion in water having regard to specific conditions
	9	IP69k Automotive standard DIN40050 signifies resistance to high pressure jets (up to 80bar) from any angle

Hazlux®

Introducing the **NEW** Industrial and Hazardous Location Lighting Catalogue from Hazlux®

Thomas & Betts® is committed to delivering high quality industrial lighting fixtures designed, tested and certified for use in hazardous locations and adverse environment conditions.

You can rely on **Hazlux®** to safely provide light where you need it - even under the harshest indoor and outdoor conditions. If safety, labour reduction, quality and reliability are your priorities, consider **Hazlux®** lighting products to reduce maintenance and prevent downtimes. Specifically designed and approved to UL and CSA for the American market.

Call now to order!

our **NEW** Industrial and Hazardous Location Lighting product catalogue on tel +44 (0) 1675 468 213 or visit our website at www.tnb-hazardous.com

XFF Range Tubular fluorescent fitting

Approvals / Characteristics

Features

- Manufactured from marine grade aluminium
- Supplied with offshore grade paint
- All components mounted on sliding gear tray for easy installation and maintenance
- Standard components used inside body allowing reduced maintenance costs
- Available in polycarbonate (light, high impact resistant) or in glass (specific chemical environment & paint shop)
- Including accessories (cable gland & fixing brackets)

Certification & Standards

Approved to: EN60079-0, 60079-1, 60079-31
 EC TYPE Examination Certificate:
 INERIS 11 ATEX 0051X
 Ex II 2 G
 Ex d IIC T6 Gb for ≤ -20°C to ≤ +55°C (All Polycarbonate tubes)
 Ex d IIC T6 Gb for ≤ -20°C to ≤ +55°C (Glass tubes)
 Ex d IIB T6 Gb for ≤ -20°C to ≤ +55°C (Glass versions - XFR140, XFR165, XFF240 and XFF265)
 Ex II 2 D
 Ex tb IIIC T80°C Db IP66
 Glow wire test: 960°C EN60598-2-22
 Safe operating temperature range: -20°C to +55°C

The fixture is supplied with non-barrier cable glands. For installations in either Zone 1 or in the presence of Group IIC gases, barrier glands are required. Please refer to EN-60079-14.

**T5 for gas or T95°C for dust when supply is 240V AC

Enclosure

End caps according to standard:
EN1706:EN AC-AISI12(Fe) DF or
EN AC-AISI10Mg(a) DF marine grade aluminium
UV protected extruded polycarbonate tube,
thickness 2.5mm
Borosilicate glass, thickness 7mm

Fixing

Standard: D023 - 2 Zinc Plated Steel articulated
(brackets for ceiling mounting included)

Rated voltages

Electronic ballast:
AC/DC 110-260V, 50-60Hz

Power factor

Up to 0.98

Cable entries

Standard: Two entries 3/4" NPT included
One 3/4" Nickel Plated Brass plug (EXN075/SP)
One cable gland (EXN05AMC3) - 3/4" NPT Nickel
Plated Brass for non-armoured cable, diameter 12-16mm

Terminal block (plug in terminal block)

Up to 10mm² (rigid wire), 6mm² (flexible wire)
Terminals supplied L1, L2, L3, N, PE (looping possible
with 1 additional cable gland)

Lamps (order separately)

T8 bi-pin G13 tube, Ø 26 - white industry 4000°K
G11 compact fluorescent PL lamp

Shock proof kit

See dimension column A
D036 - 1690mm
D035 - 1385mm
D034 - 780mm

Other options

Stainless steel shock proof kit 304L

Colour (standard)

● XF****-OG000 - Yellow offshore, RAL 1003

Colour options

*X... F... -0A000 (to complete with nominal rating & mounting) - Narrow beam, for example XQF400P-0A000

Enclosure

Marine grade aluminium alloy type according to EN1706:EN AC-AISI7 Mg 0,6 T6
Cathodically treated
12mm toughened glass

Rated voltages

Version HPS/metal halide:

Standard: 230V 50Hz ferromagnetic ballast, with capacitor

Option: ferromagnetic ballast

- 220V 60Hz

- 120V 60Hz on few models

Power factor

Up to 0.85 for version with compensated ballast (Sodium HP and metal halide)

Cable entries

Standard: Two entries M20 included

One plug (EXN/M20/HSP) and one cable gland (EXN04MMC2) - Nickel Plated Brass ISO M20 for non-armoured cable, diameter 10-16mm

Terminal block

Up to 6mm² (rigid wire), 4mm² (flexible wire)

Terminal supplies for L, N, PE

Lamps (Installed)

Polished aluminium reflector

Standard: wide beam

Option: narrow beam

Fixing

Standard: galvanised steel flat mounting bracket,

yellow polyester paint RAL1003

Pole mounted: Ø 40 to 60mm

Other options

Sling (SC100 ELINGUE)

FC 108 (CLAMP FOR BEAM MOUNTING)

SC 100 (SAFETY HARNESS)

SA 103 (Jobsite option)

Galvanised steel support with base plate (SA103)

XHM... Pre wired masthead floodlighting systems:

Full system with 2 or 4 floodlights

For example XHM 4400 (4 x 400 W HPS)

(to complete with nominal rating)

Colour (standard)

● X****-00000 - Yellow offshore, RAL 1003

Colour option

● X****-B0000 - Grey, RAL 7035

● X****-C0000 - Black, RAL 9004

● X****-D0000 - Hammered Blue, RAL 5015

● X****-F0000 - Red, RAL 3001

● X****-G0000 - Blue, RAL 5010

● X****-J0000 - Green, RAL 6032

○ X****-M0000 - White, RAL 9010

Enclosure

End caps according to standard:
 EN1706:EN AC-AISI12(Fe) DF or
 EN AC-AISI10Mg(a) DF marine grade aluminium
 Including offshore option
 Yellow offshore polyurethane paint RAL 1003
 UV protected extruded polycarbonate tube,
 thickness 2.5mm

Rated voltages

Ferromagnetic ballast

Cable entries

Standard: Two M20 cable entries
 Supplied with:
 One plug entry: male - 2 poles & earth -
 10Amp - 250VAC
 One socket entry: female - 2 poles & earth -
 10 Amp - 250VAC
 One extendable cable with male plug and female
 socket (Helical cable) expandable to 5 metre max

Terminal block (plug in terminal block)

Up to 6mm²

Terminals supplied L, N, PE

Lamps (order separately)

T8 bi-pin G13 tube, Ø 26 - white industry 4000°K

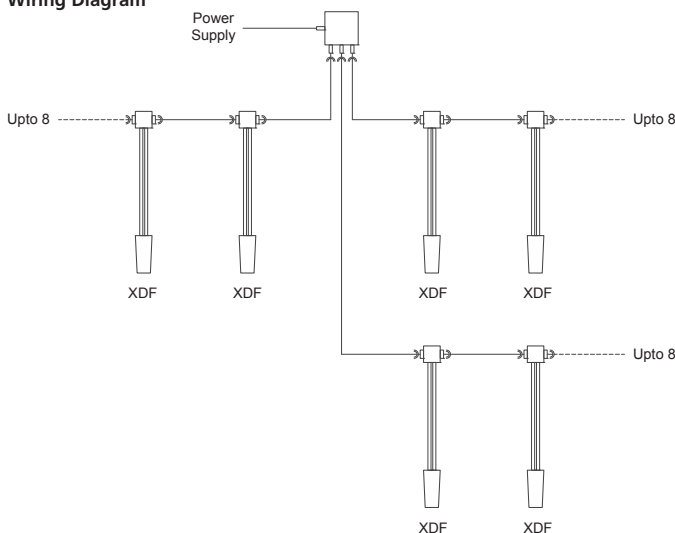

Fixing (included)

2 Brackets for beam clamp fixing

Other options

Other voltage ratings: on request

Wiring Diagram

Must be used with XD104R - Junction box

For 3 x 8 = 24 light fitting

Enclosure

End caps and cover in marine grade aluminium alloy type AS10GY30. Yellow offshore polyurethane paint RAL 1003
UV protected extruded polycarbonate tube, thickness 2.5mm
Borosilicate glass, thickness 7mm

Rated voltages and emergency function

Electronic ballast: AC/DC 230V, 50Hz

Power factor

Up to 0.98

Cable entries

Model SI & AI: One M20 cable entry included
One cable gland (EXN04MMC2) - Nickel Plated Brass ISO M20 for non-armoured cable, diameter 10-16mm
Model A & AK: Two entries 3/4" NPT included
One 3/4" Nickel Plated Brass plug (EXN/075/SP)
One cable gland (EXN05AMC3) - 3/4" NPT Nickel Plated Brass for non-armoured cable, diameter 12-16mm

Self test SATI

Safety lighting with automatic built in systems test the lamps every 7 days and the battery pack every 12 weeks. Results of the test are displayed by yellow and green diodes.

Battery

XEL80: Lumen output for 1 hour = 70lm, XEL300: Lumen output for 1 hour = 280lm
Model XEL 3001 and XEL 3002 - 3 hour models available for markets outside of France and are not NFC approved

Terminal block

Terminals supplied for L, N, PE
Model A & AK: Up to 10mm² (rigid wire), 6mm² (flexible wire)
Terminals supplied for L, N, PE (looping possible with additional cable glands)

Lamps (supplied installed)

XEL 80: emergency lamp: 1 x 6W tube with G5 lampholder (70 lumen), 2 charge lamp using LEDs

XEL 300: emergency lamp: 1 x 8W tube with G5 lampholder (280 lumen), 2 charge lamp using LEDs

Fixing

Standard: D023 - 2 Zinc Plated Steel articulated brackets for ceiling mounting

Colour (standard)

Standard Remote Control installation (BAES)

Remote Control installation with integrated self testing capabilities (SATI)

EVS-EM Range

Emergency fluorescent fitting with easy disconnect

Approvals / Characteristics

Features

- Easy disconnecter for safer maintenance out of zones
- Double central locking for ingress protection
- Main body constructed of a GRP for high impact strength
- Battery duration 2 hours
- All components mounted on hinged and removable gear tray which gives easy access for installation and maintenance
- Automatic switch off on opening for safe maintenance
- Including accessories (cable gland & fixing brackets)

Battery

Ni-Cd 6V 4Ah for 18W /
Ni-Cd 6V 7Ah for 36W battery in flameproof case
Auto cut out of defective light
Lumen output in emergency mode (1 tube lit): 40% at 18W, 33% at 36W
Battery duration: 3h max 36W
Operating in maintained mode (when the main supply is connected: the tubes are lit, the battery charges / when the main supply is off: the emergency tube is lit and the battery does not recharge), or in non-maintained mode (when the main supply is connected: the tubes are not lit, the battery charges / when the main supply is off: the emergency tube is lit and the battery does not recharge)

BlackStart

It is possible to wire the EVS-EMA in order to open the fixture in ATEX zones in a completely powered down mode (battery disconnected)
Normal mode: If main power is off, battery powers emergency tube, main tubes are not lit
Disabled mode (terminals B S not connected, usually via switch): Power off, battery is disconnected, and neither main, nor emergency tubes are lit

Preventive maintenance - Self test

- Battery charge - daily
 - Emergency lamp during 1min - weekly
 - Battery charge capacity during 1hr - quarterly
 - Clear system test display
- Battery charge monitored by 2 LED

Terminal block

Up to 4mm² (rigid wire), 2.5mm² (flexible wire)
Terminals supplied L1, L2, L3, LS, N, PE

Lamps

Command must be supplied with switch on line
Tube G13 bi-pin T8 Ø 26 coolwhite 4000°K

*EVN...EM-.0C0 Automatic switch off on opening (to complete with wiring configuration)

Enclosure

Fibreglass reinforced polyester body
Polycarbonate diffuser, treated against UV

Fixing

Standard: V015 - 2 Zinc Plated Steel brackets for ceiling mounting

For wiring, please refer to the instruction manual (drawings)

Technical assistance on request

Rated voltages

Standard: electronic ballast
AC/DC 220-220V, 50-60Hz

Battery

Ni-Cd 7.2V 4Ah battery
Lumen output in emergency mode (1 tube lit)
40% at 18W, 33% at 36W
Monitored by one LED:

- operating in maintained mode;
 - when the main supply is connected: the tubes are lit, the battery charges
 - when the main supply is off: the emergency tube is lit and the battery does not recharge
- Operating in non maintained mode;
 - when the main supply is connected: the tubes are not lit, the battery charges
 - when the main supply is off: the emergency tube is lit and the battery does not recharge

Power factor

Up to 0.98

Cable entries

Standard: Three M20 cable entries included
Two M20 Nylon plugs (EX-M20)
One cable gland (EXCGM20S) - ISO M20 Nylon for non-armoured cable, diameter 6-12mm
For armoured cable - continuity plate option: Nickel Plated Brass cable gland (EXN04MMC1), diameter 6-12 / 8.5-16mm

Terminal block

Up to 4mm² (rigid wire), 2.5mm² (flexible wire)
Select function: Lighting in maintained mode or lighting in non-maintained mode
Terminal block supplied: N, PE, L1, L2, L3, LS (Looping possible with additional cable gland)

Lamps (order separately)

Tube G13 bi-pin T8 Ø 26 coolwhite 4000°k

*Option: ...F... -0A000 (to complete with nominal rating & mounting) - Narrow beam, for example: SF400P-0A000

Enclosure

Marine grade aluminium alloy type according to EN1706:EN AC-AISi7 Mg 0,6 T6
Cathoretically treated
12mm toughened glass
Stainless steel screws

Temperature

Ambient temperature: -20°C to +60°C

Rated voltages

Standard: 230V 50Hz ferromagnetic ballast, with capacitor
Option: 220V 60Hz ferromagnetic ballast or 120V 60Hz on few models, ferromagnetic ballast

Power factor

Up to 0.85 for version with compensated ballast (Sodium HP and metal halide)

Cable entries

Standard: Two M20 entries included
One M20 Nickel Plated Brass plug (EXN/M20/SP)
One cable gland (EXN04MMC2) - Nickel Plated Brass M20 for non-armoured cable, diameter 10-16mm

Lamps (Installed)

Polished aluminium reflector
Standard: wide beam
Option: narrow beam

Other options

Sling (SC100 ELINGUE)
Galvanised steel support with base plate (SA103)
Pre wired masthead floodlighting systems: Full system with 2 or 4 floodlights (to complete with nominal rating), for example HM 4400 (4 x 400 W HPS)
(See photo on XF Range)

Terminal block

Up to 6mm² (rigid wire), 4mm² (flexible wire)
Terminals supplied: L, N, PE

Fixing

Standard: galvanised steel flat mounting bracket,
Pole mounted: Ø 40 to 60mm

Colour (standard)

Weatherproof recessed fluorescent fitting

Approvals / Characteristics

Features

- Fitting combines photometric qualities, strength and design
- Including accessories (cable gland)

Technical Data

Glow wire test: 960°C EN60598-2-22
Safe operating temperature range: -20°C to +50°C
IP test: IP64 IEC 60529 (2001)

Dimensions

EST265-A0J0	5 Wire Loop	2 x 58	Frosted	0.5	1664	1612	105	25

Enclosure

Steel housing and body painted in white polyester powder paint RAL 9016 (stainless steel 304L on request)

6mm clear toughened glass panel (optional frosted low lumen output)

Temperature

Operating temperature range: -20°C to +40°C

Rated voltages

Standard: electronic ballast
AC/DC 110-260V, 50-60Hz

Power factor

Up to 0.98

Cable entries

Standard: Two M20 cable entries included

One M20 Nylon plug (EX-M20)

One cable gland (EXCGM20S) - ISO M20 Nylon for non-armoured cable, diameter 6-12mm

Terminal block

Up to 4mm² (rigid wire), 2.5mm² (flexible wire)

Terminals supplied L1, L2, L3, N, PE

Lamps (order separately)

Tube G13 bi-pin T8 Ø 26 coolwhite 4000°k

Fixing

Fixing by 4 M6 threaded bolts (not supplied) joined to the main body

Spares & Fixings Accessories see pages 90-95

**For colour combinations: Colour combination: please contact Sales for more information

Enclosure

Marine grade aluminium alloy type
EN1706 AC-43100KF-AISI 10Mg
Aluminium reflector

Temperature

Ambient temperature: -20°C to +60°C

Cable entries

Standard: Two entries M20 included
One M20 nickel plated brass plug (EXN/M20/SP) and
one cable gland (EXN04MMC2) - Nickel Plated Brass
ISO M20 for non-armoured cable, diameter 10-16mm

Terminal block

Up to 6mm²
Terminals supplied for L, N, PE

Lamps (supplied)

For xenon flash versions
Flashing rate: 45 to 60 - per minute

Globe

Polycarbonate, thickness 3mm

Colour (standard)

● FB/FL***-00000 - Yellow offshore, RAL 1003

Colour options

- FB/FL***-B0000 - Grey, RAL 7035
- FB/FL***-C0000 - Black, RAL 9004
- FB/FL***-D0000 - Hammered Blue, RAL 5015

Enclosure

Reinforced black polycarbonate end caps
UV protected extruded polycarbonate tube, thickness 2.5mm

Temperature

Ambient temperature: -10°C to +40°C

Fixing

Standard: D023 - 2 Zinc Plated Steel articulated brackets for ceiling mounting

For wiring, please refer to the instruction manual (drawings)

Technical assistance on request

Power Factor

Up to 0.98

Rated voltages

Electronic ballast: AC/DC 220-240V, 50-60Hz

Battery

Ni-Cd battery 7.2V, 4Ah

Lumen output in emergency mode (1 tube lit):
40% for 8W, 33% for 36W

Battery duration in emergency mode: 2 hours

Monitored by one LED

Operating in maintained mode (when the main supply is connected: the tubes are lit, the battery charges / when the main supply is off: the emergency tube is lit and the battery does not recharge), or in non-maintained mode (when the main supply is connected: the tubes are not lit, the battery charges / when the main supply is off: the emergency tube is lit and the battery does not recharge)

Cable entries

Standard: Two M20 entries included

One cable gland (EXCGM20S) - ISO M20 Nylon for non-armoured cable, diameter 6-12mm

One Nylon plug (EXM20)

Terminal block (plug in terminal block)

Terminals supplied: L1,2,N, PE

Up to 10mm² (rigid wire), 6mm² (flexible wire)

Standard: terminals supplied for L1, 2, N, PE

Looping possible with additional cable gland

Lamps (order separately)

T8 bi-pin G13 tube, Ø 26 - white industry 4000°K

*(Through options) EVT...-0C0 Automatic switch off on opening (to complete with wire configuration)

Enclosure

Fiberglass reinforced polyester body
Polycarbonate diffuser, treated against UV

Temperature

Ambient temperature: -10°C to +40°C

Fixing

Standard: V015 - 2 Zinc Plated Steel brackets for ceiling mounting

For wiring, please refer to the instruction manual (drawings)

Technical assistance on request

Rated voltages

Electronic ballast: AC/DC 220-240V, 50-60Hz

Battery

Ni-Cd 7.2V 4Ah

Lumen level in emergency mode (1 tube lit):

40% for 18W, 33% for 36W

Battery duration in emergency mode:

2 hours

Battery charge monitored by LED

Operating in maintained mode (when the main supply is connected: the tubes are lit, the battery charges / when the main supply is off: the emergency tube is lit and the battery does not recharge), or in non-maintained mode (when the main supply is connected: the tubes are not lit, the battery charges / when the main supply is off: the emergency tube is lit and the battery does not recharge)

Power factor

Up to 0.98 with electronic ballast

Cable entries

Standard: Three M20 cable entries included

Two M20 Nylon plugs (EX-M20)

One cable gland (EXCGM20S) - M20 Nylon for non-armoured cable, diameter 6-12mm

For armoured cable - continuity plate option:

Nickel Plated Brass cable gland (EXN04MMC1), diameter 6-12 / 8.5-16mm (1 or 2 according to number of plates)

Terminal block (plug in terminal block)

Up to 6mm² (rigid wire), 4mm² (flexible wire)

Terminals supplied : L1, L2, L3, N, PE, LS

Select function: Lighting in maintained mode or lighting in non-maintained mode

Lamps (order separately)

T8 bi-pin G13 tube, Ø 26 - cool white 4000°K

EMA version available upon request

(with automatic test) - similar to EVS-EMA

Approvals / Characteristics

Features

- External mounting points allow for junction boxes to be mounted without removing the lid
- Robust design
- Manufactured from anti static GRP so eliminating any chance of static build up
- Supplied complete with terminals and glands so all on site combinations are covered

Certification & Standards

Approved to: EN60079-0, 60079-7, 60079-11, 60079-31

Custom Built Enclosures

Custom built Ex d enclosures & panels

DTS Ex d control panels are constructed & tested according to ATEX protection type Ex d.

Available with a wide variety of components such as switches, contactors and relays, which can be mounted into explosionproof enclosures constructed to keep internal explosions from igniting the surrounding atmosphere.

Ex d control panels are usually custom-built in cooperation with the customer to suit their specific application requirements.

Enclosure

Marine aluminium alloy body (CU<0.05%)
 Ingress rating IP66 (EN60529)
 Neoprene gasket
 Stainless steel screws

Protection class: I

Cable entries

NPT or ISO threaded entries according to specification
 The fixture is supplied with non-barrier cable glands.
 For installations in either Zone 1, or in the presence of Group IIC gases, barrier glands are required.
 Please refer to EN-60079-14.

Fixing

By fixing lugs incorporated to the box

Colour (standard)

● GUB***-00000 - Yellow offshore, RAL 1003

Colour options

- GUB***-B0000 - Grey, RAL 7035
- GUB***-C0000 - Black, RAL 9004
- GUB***-D0000 - Hammered Blue, RAL 5015
- GUB***-F0000 - Red, RAL 3001
- GUB***-G0000 - Blue, RAL 5010
- GUB***-J0000 - Green, RAL 6032
- GUB***-M0000 - White, RAL 9010

Enclosure

Marine grade aluminium alloy type AS10GY30
Toughened glass display
Stainless steel external earth stud
Stainless steel screws
Hinged door standard on EJB versions of
EJB8-11-12-13, (optional on other EJB versions)

Protection class: I

Cut-out equipment

"Sider" load-breaker, 50A to 400A,
3 or 4-poles visible breaking
(up to 800A on request)
Padlockable handle
Options: security key, auxiliary contacts
mechanical indicator

Cable entries

NPT or ISO entries and threads as requested
Brass, Nickel Plated Brass, or Stainless Steel cable
glands can be supplied (order separately) for either
armoured, or non-armoured cables.

Fixing

4 threaded holes on the back plate (see table)

Colour (standard)

Liquid Tight Conduit - Galvanised Steel Core

Technical Specifications

General Oil Resistant - Galvanised Steel Core with a general purpose oil resistant coating

General Oil Resistant (Black) Type	Conduit Size Metric (mm)	US Trade Size (inch)	Inside Diameter (mm)	Coil Lengths (m)
EXLB03*	16	3/8	12.5	10/30
EXLB04*	20	1/2	16.0	10/30
EXLB05*	25	3/4	21.0	10/30
EXLB06*	32	1	26.4	10/20
EXLB07*	40	1 1/4	35.3	10/20
EXLB08*	50	1 1/2	40.4	10/20
EXLB09*	63	2	51.6	10/20

*Add coil length to complete part number, e.g. 10 metres = EXLB0510

Certification Standard: IEC 61386
Static Temp: -25°C to +105°C
Flexing Temp: -5°C to +105°C

Special Characteristics
 Flame retardant PVC covering

Flame Propagation
 Flame dies in less than 30 seconds after ignition source is removed

Low Fire Hazard - Galvanised Steel Core with a LFH coating

Low Fire Hazard (Black) Type	Conduit Size Metric (mm)	US Trade Size (inch)	Inside Diameter (mm)	Coil Lengths (m)
EXLT03*	16	3/8	12.5	10/30
EXLT04*	20	1/2	16.0	10/30

EXLT08*	50	1 1/2	40.4	10/20
EXLT09*	63	2	51.6	10/20

*Add coil length to complete part number, e.g. 10 metres = EXLT0510

Certification Standard: IEC 61386
 LUL Fully Compliant (E1042A6)
 MOD to NES 518: Issue 3 DEF STAN 61-12 (Part 31) Issue 1

Static Temp: -25°C to +90°C
Flexing Temp: -5°C to +90°C
Special Characteristics
 Limited Fire Hazard, zero halogen (BS6425 Pt 1)

Flame Propagation
 Flame dies in less than 30 seconds after ignition source is removed

Low Fire Hazard with EMC Protection - Galvanised Steel Core with a galvanised steel EMC shield and LFH Covering

Low Fire Hazard with EMC (Black) Type	Conduit Size Metric (mm)	US Trade Size (inch)	Inside Diameter (mm)	Coil Lengths (m)

EXSLH07*	40	1 1/4	35.3	10/20
EXSLH08*	50	1 1/2	40.4	10/20
EXSLH09*	63	2	51.6	10/20

*Add coil length to complete part number, e.g. 10 metres = EXLLH0510

Certification Standard: IEC 61386
Static Temp: -50°C to +130°C
Flexing Temp: -5°C to +130°C

Special Characteristics
 Flame resistance: UL94 V2
 Chemical and oil resistant

Flame Propagation
 Flame dies in less than 30 seconds after ignition source is removed

High Temperature Highly Flexible - Stainless Steel Core with a high temperature, highly flexible coating

High Temperature, Highly Flexible (Blue) Type	Conduit Size Metric (mm)	US Trade Size (inch)	Inside Diameter (mm)	Coil Lengths (inch)
EXSHC03*	16	3/8	12.5	10/30
EXSHC04*	20	1/2	16.0	10/30

Explosion-Proof and Dust- Ignition-Proof for Use in Hazardous Locations

With their flexible design, T&B® XP Flex™ Couplings make it easy to achieve tight bends in conduit systems in confined spaces - or to connect stationary equipment to equipment that moves or vibrates. Their explosion-proof and corrosion-resistant construction mean you can use them with confidence in hazardous and wet locations.

Connector Description:

EX - Brass
 EXN - Nickel Plated Brass
 EXS - Stainless Steel 316

Enlargers (/E) are used where the thread size of the female side of the device is larger than the male side.

Reducers (/R) are used where the thread size of the female side of device is smaller than the male side.

Thread Convertors (/TC) are used where a conversion is required between thread types, e.g. Metric to PG.

Our comprehensive range of Adaptors and Reducers provide a method of matching threadforms on hazardous area approved equipment whilst ensuring the integrity and approval of the installation is maintained.

Manufactured in the UK, this new range of converters meets the latest ATEX / IECEx & CSA / UL standards. This means that all the standards are marked on the product around the main body. This allows for them to be seen easily once installed, a key component of the new standard.

Kopex's Enlargers, Reducers and thread converters are designed for hazardous area applications and are certified to protection concepts Exd "Flameproof" and Exe "Increased Safety" for use in Zone 1, 2, 2.1, 2.2 applications. Under NEC Class I Div1 ABCD Class II Div1 EFG.

Connector Description:

EX - Brass

EXN - Nickel Plated Brass

EXS - Stainless Steel 316

Enlargers (/E) are used where the thread size of the female side of the device is larger than the male side.

Reducers (/R) are used where the thread size of the female side of device is smaller than the male side.

Thread Convertors (/TC) are used where a conversion is required between thread types, e.g. Metric to PG.

Our comprehensive range of Adaptors and Reducers provide a method of matching threadforms on hazardous area approved equipment whilst ensuring the integrity and approval of the installation is maintained.

Manufactured in the UK, this new range of converters meets the latest ATEX / IECEx & CSA / UL standards. This means that all the standards are marked on the product around the main body.

This allows for them to be seen easily once installed, a key component of the new standard.

Kopex's Enlargers, Reducers and thread converters are designed for hazardous area applications and are certified to protection concepts Exd "Flameproof" and Exe "Increased Safety" for use in Zone 1, 2, 2.1, 2.2 applications. Under NEC Class I Div1 ABCD Class II Div1 EFG.

Thomas and Betts manufacture and design a wide range of electrical equipment for hazardous and hostile environments to ensure the safety of the personnel working in them. The extensive range covers Kopex-Ex metallic and non metallic conduit and fittings and the DTS range of lighting junction and control boxes. These products are approved to a wide range of hazardous area standards including ATEX, IECEx, UL, CSA, GOST and Inmetro.
