PNOZ mm0p-T

PILZ
THE SPIRIT OF SAFETY

▸ Configurable compact control systems PNOZmulti Mini

1   Introduction

1.1   Validity of documentation

This documentation is valid for the product PNOZ mm0p-T. It is valid until new documentation is published.

This operating manual explains the function and operation, describes the installation and provides guidelines on how to connect the product.

1.2   Using the documentation

This document is intended for instruction. Only install and commission the product if you have read and understood this document. The document should be retained for future reference.

1.3   Definition of symbols

Information that is particularly important is identified as follows:

> **DANGER!**
>
> This warning must be heeded! It warns of a hazardous situation that poses an immediate threat of serious injury and death and indicates preventive measures that can be taken.

> **WARNING!**
>
> This warning must be heeded! It warns of a hazardous situation that could lead to serious injury and death and indicates preventive measures that can be taken.

> **CAUTION!**
>
> This refers to a hazard that can lead to a less serious or minor injury plus material damage, and also provides information on preventive measures that can be taken.

> **NOTICE**
>
> This describes a situation in which the product or devices could be damaged and also provides information on preventive measures that can be taken. It also highlights areas within the text that are of particular importance.

INFORMATION

This gives advice on applications and provides information on special features.

2 Overview

2.1 Range

▶ Base unit PNOZ mm0p-T

▶ Right-hand terminator: (yellow)

▶ Left-hand terminator: (yellow/black)

2.2 Unit features

Using the product PNOZ mm0p-T:

Base unit from the configurable control system PNOZmulti

The product has the following features:

▶ Can be configured in the PNOZmulti Configurator

▶ Semiconductor outputs:

4 safety outputs
Depending on the application, up to PL e of EN ISO 13849-1 and up to SIL CL 3 of EN IEC 62061

▶ 12 inputs for connecting, for example:

– E-STOP pushbuttons

– Two-hand pushbuttons

– Safety gate limit switches

– Reset buttons

– Light beam devices

– Scanners

– Enabling switches

– PSEN

– Operating mode selector switches

– Pressure sensitive mats

▶ 8 configurable inputs/outputs

Can be configured as:

– Inputs (see above for connection options)

or

– Outputs for standard applications

▶ 4 configurable outputs

Can be configured as:

– Outputs for standard applications

or

– Test pulse outputs

  ▶ LED for:
    – Error messages
    – Diagnostics
    – Supply voltage
    – State of the inputs
    – State of the outputs
  ▶ Test pulse outputs used to monitor shorts across the inputs
  ▶ Monitoring of shorts between the safety outputs
  ▶ Plug-in connection terminals:
    Either spring-loaded terminal or screw terminal available as an accessory (see order reference)
  ▶ Pushbutton to change the operating status and download the project.
  ▶ Coated version:
    Increased environmental requirements (see Technical details [📖 24])

2.3   Chip card

To be able to use the product you will need a chip card.

Chip cards are available with memories of 8 kByte and 32 kByte. For large-scale projects we recommend the 32 kByte chip card (see Technical Catalogue: Accessories chapter).

2.4   Front view
Front view with and without cover

Legend

▶ X1:
  – Inputs I8 ... I15

▶ X2:
  – Configurable test pulse/auxiliary outputs T0M20 ... T3M23
  – Semiconductor outputs O0 ... O3

▶ X3:
  – Configurable inputs/outputs IM0 – IM3
  – Inputs I4 ... I7

▶ X4:
  – Configurable inputs/outputs IM16 – IM19
  – Supply connections

▶ LEDs:
  – POWER
  – RUN
  – DIAG
  – FAULT
  – I FAULT
  – O FAULT
  – INFO
  – I/O

3 Safety

3.1 Intended use

The configurable small control systems PNOZmulti are used for the safety-related interruption of safety circuits and are designed for use in:

▸ E-STOP equipment

▸ Safety circuits in accordance with VDE 0113 Part 1 and EN 60204-1

⚠	**CAUTION!**
	Inputs and outputs for standard functions must not be used for safety-related applications.

The coated version of the product PNOZ mm0p-T is suitable for use where there are increased environmental requirements (see Technical details [📖 24]).

The following is deemed improper use in particular:

▸ Any component, technical or electrical modification to the product

▸ Use of the product outside the areas described in this manual

▸ Use of the product outside the technical details (see Technical details [📖 24]).

ⓘ	**NOTICE**
	EMC-compliant electrical installation
	The product is designed for use in an industrial environment. The product may cause interference if installed in other environments. If installed in other environments, measures should be taken to comply with the applicable standards and directives for the respective installation site with regard to interference.

3.2 System requirements

Please refer to the "Product Modifications" document in the "Version overview" section for details of which versions of the PNOZmulti Configurator can be used for this product.

3.3 Safety regulations

3.3.1 Safety assessment

Before using a unit it is necessary to perform a safety assessment in accordance with the Machinery Directive.

Functional safety is guaranteed for the product as a single component. However, this does not guarantee the functional safety of the overall plant/machine. In order to achieve the required safety level for the overall plant/machine, define the safety requirements for the plant/machine and then define how these must be implemented from a technical and organisational standpoint.

3.3.2 Use of qualified personnel

The products may only be assembled, installed, programmed, commissioned, operated, maintained and decommissioned by competent persons.

A competent person is someone who, because of their training, experience and current professional activity, has the specialist knowledge required to test, assess and operate the work equipment, devices, systems, plant and machinery in accordance with the general standards and guidelines for safety technology.

It is the company's responsibility only to employ personnel who:

▸ Are familiar with the basic regulations concerning health and safety / accident prevention

▸ Have read and understood the information provided in this description under "Safety"

▸ And have a good knowledge of the generic and specialist standards applicable to the specific application.

3.3.3 Warranty and liability

All claims to warranty and liability will be rendered invalid if

▸ The product was used contrary to the purpose for which it is intended

▸ Damage can be attributed to not having followed the guidelines in the manual

▸ Operating personnel are not suitably qualified

▸ Any type of modification has been made (e.g. exchanging components on the PCB boards, soldering work etc.).

3.3.4 Disposal

▸ In safety-related applications, please comply with the mission time T_M in the safety-related characteristic data.

▸ When decommissioning, please comply with local regulations regarding the disposal of electronic devices (e.g. Electrical and Electronic Equipment Act).

3.3.5 For your safety

The device meets all the necessary conditions for safe operation. However, you should always ensure that the following safety requirements are met:

▸ This operating manual only describes the basic functions of the device. Advanced functions are described in the online help for the PNOZmulti Configurator, in the "PNOZmulti Communication Interfaces" document and in "PNOZmulti Special Applications". Only use these functions once you have read and understood the documentation.

▸ You must note the information stated in the PNOZmulti Safety Manual.

▸ Adequate protection must be provided for all inductive consumers.

▸ Do not open the housing or make any unauthorised modifications.

▸ Please make sure you shut down the supply voltage when performing maintenance work (e.g. exchanging contactors).

4   Function description

4.1   Integrated protection mechanisms

The relay conforms to the following safety criteria:

▸ The circuit is redundant with built-in self-monitoring.

▸ The safety function remains effective in the case of a component failure.

▸ The safety outputs are tested periodically using a disconnection test.

4.2   Functions

The function of the safety system's inputs and outputs depends on the safety circuit created using the PNOZmulti Configurator. A chip card is used to download the safety circuit to the base unit. The base unit has 2 microcontrollers that monitor each other. They evaluate the input circuits and switch the outputs accordingly.

The LEDs indicate the status of the safety system plus the inputs and outputs.

The online help on the PNOZmulti Configurator contains descriptions of the operating modes and all the functions of the PNOZmulti safety system, plus connection examples.

4.3   System reaction time

Calculation of the maximum reaction time between an input switching off and a linked output in the system switching off is described in the document "PNOZmulti System Expansion".

4.4   Diagnostics

The status and error messages displayed by the LEDs are saved in an error stack. This error stack can be read out from PNOZmulti Configurator via the USB interface.

4.5   Block diagram
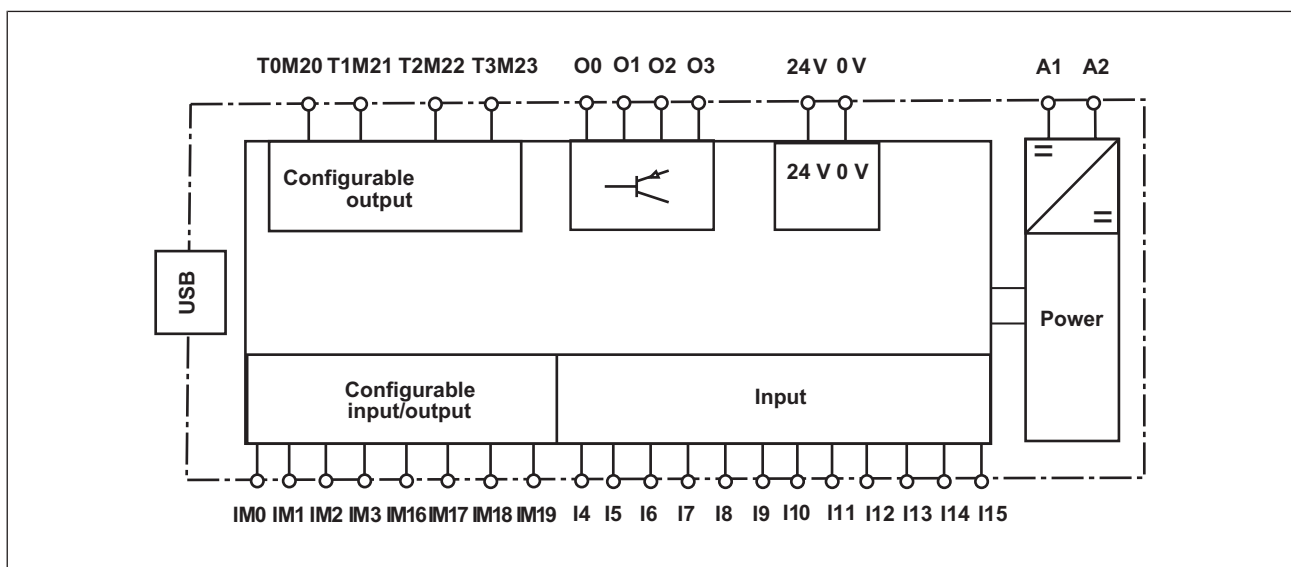

5 Installation

5.1 Control cabinet installation

▶ The unit should be installed in a control cabinet with a protection type of at least IP54.

▶ Fit the safety system to a horizontal mounting rail. The venting slots must face upwards and downwards. Other mounting positions could destroy the safety system.

▶ Use the notch on the rear of the unit to attach it to a mounting rail.

▶ In environments exposed to heavy vibration, the unit should be secured using a fixing element (e.g. retaining bracket or end angle).

▶ Push the unit upwards or downwards before lifting it from the mounting rail.

▶ To comply with EMC requirements, the mounting rail must have a low impedance connection to the control cabinet housing.

> **NOTICE**
>
> Damage due to electrostatic discharge!
>
> Electrostatic discharge can damage components. Ensure against discharge before touching the product, e.g. by touching an earthed, conductive surface or by wearing an earthed armband.

5.1.1 Mounting distances

With control cabinet installation it is essential to maintain a certain distance from the top and bottom, as well as to other heat-producing devices (see diagram). The values stated for the mounting distances are minimum specifications.

The ambient temperature of the product in the control cabinet must not exceed the figure stated in the technical details, otherwise air conditioning will be required.

Mounting distances:
5.2   Dimensions

*with spring-loaded terminals
## 5.3   Install base unit without expansion module

Make sure that the terminators are inserted on the top left and right of the unit :

▶   Left: Black/yellow terminator

▶   Right: Yellow terminator

5.4   Connecting the base unit and expansion modules

The position of the expansion modules is defined in the PNOZmulti Configurator. The expansion modules are connected to the left or right of the base unit, depending on the type.

Please refer to the document "PNOZmulti System Expansion" for details of the number of modules that can be connected to the base unit and the module types.

The modules are linked via jumpers.

▸ Remove the terminator on the side of the base unit and on the expansion module.

▸ Before installing the units on the mounting rail, connect the base unit to the expansion module using the jumper supplied .

▸ Fit the appropriate terminator to the unconnected interfaces on the base unit and expansion module.

– Left-hand side on the base unit and expansion modules to the left of the base unit: Black/yellow terminator

– Right-hand side on the base unit and expansion modules to the right of the base unit: Yellow terminator
⚠ **CAUTION!**

Only connect the base unit and expansion modules when the supply voltage is switched off.

6 Commissioning

6.1 General wiring guidelines

The wiring is defined in the circuit diagram in the Configurator. There you can select the inputs that are to perform a safety function and the outputs that are to switch this safety function.

Please note:

▸ Information given in the Technical details [📖 24] must be followed.

▸ Outputs O0 to O3 are semiconductor outputs

▸ Use copper wiring with a temperature stability of 75 °C.

▸ Sufficient fuse protection must be provided on all output contacts with inductive loads.

▸ The safety system and input circuits must always be supplied by a single power supply. The power supply must meet the regulations for extra low voltages with protective separation.

▸ Test pulse outputs must exclusively be used to test the inputs. They must not be used to drive loads.
Do not route the test pulse lines together with actuator cables within an unprotected multicore cable.

▸ Test pulse outputs are also used to supply safety mats that trigger a short circuit.
Test pulses that are used for the safety mat may not be reused for other purposes.

6.2 Preparing for operation

6.2.1 Function test during commissioning

| ⚠	**CAUTION!**
	It is essential to check that the safety devices operate correctly
	   – after the chip card has been exchanged
	   – after a project has been downloaded

6.2.2 Using the chip card

❗	**NOTICE**
	The chip card contact is only guaranteed if the contact surface is clean and undamaged. For this reason please protect the chip card's contact surface from
	   – Contamination
	   – Contact
	   – Mechanical impact, such as scratches.

> **NOTICE**
>
> Switch off the product before inserting or exchanging the chip card.

Make sure that you do not bend the chip card as you insert it into the chip card slot.
6.2.3 Commissioning the PNOZmulti safety system

Procedure:

▸ Wire the inputs and outputs on the base unit in accordance with the circuit diagram.

▸ Connect the supply voltage:

– Supply voltage for the control system:

– Terminal A1: + 24 VDC

– Terminal A2: 0 V

– Supply voltage for the semiconductor outputs:

– 24 V terminal: + 24 VDC

– 0V terminal: 0 V

Please note: The supply voltage for the semiconductor outputs must always be present, even if you are not using the semiconductor outputs.

6.2.3.1 Load project from chip card

Procedure:

▸ Insert the chip card containing the current project into the card slot on the base unit.

▸ Switch on the supply voltage. The INFO LED lights when a new or modified project is present.

▸ Load the project by pressing the pushbutton. For the project to be downloaded, the pushbutton must be held down for between 4 and 8 seconds. Release the pushbutton while the INFO LED flashes rapidly.
If you hold the pushbutton down for too long, the process will be aborted and the project will not be downloaded.

6.2.3.2 Load project via USB port

Procedure:

▶ Insert a chip card into the card slot on the base unit.

▶ Connect the computer containing the PNOZmulti Configurator to the base unit via the USB port.

▶ Switch on the supply voltage.

▶ Download the project (see PNOZmulti Configurator's online help).

▶ Once the project has been successfully downloaded, the status of the inputs and outputs and the supply voltage will be shown via the LEDs. The "RUN" LED is lit.

6.2.4 Connection

Supply voltage	AC	DC
For the safety system		A1 — + 24 V DC A2 — 0 V
For the semiconductor outputs Must always be present, even if the semiconductor outputs are not used		24 V — + 24 V DC 0 V — 0 V

Input circuit	Single-channel	Dual-channel
E-STOP **without** detection of shorts across contacts	IM0 — S1 — L+	IM0 — S1 — L+ IM1 — L+
E-STOP **with** detection of shorts across contacts	IM0 — S1 T0M20	IM0 — S1 IM1 T1M21 T0M20

| Start circuit	Input circuit without detection of shorts across contacts	Input circuit with detection of shorts across contacts
	I5 — S3 — L+	S3 I5 T0M20

Redundant output		
Single output		
Single output with advanced fault detection*		

*Two loads may be connected to each safety output with advanced fault detection, even on applications in accordance with EN IEC 62061, SIL CL 3. Prerequisite: Feedback loop is connected, shorts across contacts and external power sources are excluded (e.g. through separate multicore cables). Please note that, in the event of an error in the feedback loop, the safety system switches to a safe condition and shuts down **all** the outputs.

Feedback loop	Redundant output	
Contacts from external contactors		

6.3 Connection example

Dual-channel E-STOP and safety gate wiring, monitored start (IM18), feedback loop (IM16)
7   Operation

7.1   LED indicators

The PNOZmulti control system is ready for operation when the "POWER" and "RUN" LEDs on the base unit are lit continuously.

Legend

☼	LED on

Basis						
RUN	DIAG	FAULT	IFAULT	OFAULT	INFO	**Error**
●	◐					The existing user program has been deleted.
●		☼				External error on the base unit, leading to a safe condition, e.g. chip card not inserted
●				☼		External error on the base unit outputs, e.g. short across the contacts, leading to a safe condition.
●	◐	◐				Internal error on the base unit
●	◐		◐			Internal error on the base unit (inputs)
●	◐			◐		Internal error on the base unit (outputs)
	☼					Base unit in a STOP condition
☼			◐			External error on the base unit inputs, which does not lead to a safe condition, e.g. partially operated
☼				◐		External error on the base unit outputs, which does not lead to a safe condition, e.g. feedback input defective
					◐	Base unit switches from a RUN condition to a STOP condition or a new project is downloaded.
					☼	New project is present.

7.2   Restart PNOZmulti

The unit is in a STOP condition. Procedure for restarting the unit:

▸ Press the pushbutton for between 4 and 8 seconds to restart the unit. Release the pushbutton while the INFO LED flashes rapidly.

7.3   Stop PNOZmulti

The unit is in a RUN condition. Procedure for stopping the unit:

▸   Press the pushbutton for between 4 and 8 seconds to stop the unit. Release the push-
    button while the INFO LED flashes rapidly.

8.1 Safety characteristic data

> **NOTICE**
>
> You must comply with the safety-related characteristic data in order to achieve the required safety level for your plant/machine.

Unit	Operating mode	EN ISO 13849-1: 2015 PL	EN ISO 13849-1: 2015 Category	EN 62061 SIL CL	EN 62061 PFH_D [1/h]	EN ISO 13849-1: 2015 T_M [year]
Logic						
CPU	**2-channel**	**PL e**	**Cat. 4**	**SIL CL 3**	**1,54E-09**	**20**
Input						
SC inputs	**1-channel**	**PL d**	**Cat. 2**	**SIL CL 2**	**3,95E-09**	**20**
SC inputs	**2-channel**	**PL e**	**Cat. 4**	**SIL CL 3**	**4,61E-10**	**20**
SC inputs	**1-ch., pulsed light barrier**	**PL e**	**Cat. 4**	**SIL CL 3**	**3,95E-10**	**20**

Output						
SC outputs	**1-channel with advanced fault detection**	**PL e**	**Cat. 4**	**SIL CL 3**	**7,65E-10**	**20**
SC outputs	**1-channel**	**PL d**	**Cat. 2**	**SIL CL 2**	**8,90E-10**	**20**
SC outputs	**2-channel**	**PL e**	**Cat. 4**	**SIL CL 3**	**7,86E-10**	**20**

All the units used within a safety function must be considered when calculating the safety characteristic data.

INFORMATION

A safety function's SIL/PL values are **not** identical to the SIL/PL values of the units that are used and may be different. We recommend that you use the PAScal software tool to calculate the safety function's SIL/PL values.

---
