# M4M Network analyzers

## Accurate electrical measuring and power monitoring.

Simple in every aspect, M4M enables accurate energy efficiency evaluations and perfectly fits the ABB solution for monitoring, optimization and control of electrical system.

**Accurate measurement**  
Class 0,5 measurement according to IEC 61557-12 and advanced power quality functionalities, including historical measurements.

**Option for MID Approval**  
Class C accuracy in accordance with 2014/32/EU for billing applications.

**Clear visualization**  
Color display and App-structured menu for advanced graphic visualization.

**Smart commissioning**  
Bluetooth module for easy configuration through EPiC Mobile App unique commissioning tool.

**Intuitive access**  
Simplified access to the device via touch screen display or 5 pushbuttons keypad.

**Easy to install**  
Fast one-hand mounting and comfortable installation with clips in only 57 mm depth inside the panel.

**Fast wiring**  
All-removable terminals and one tool process to speed up the wiring activities.

**Full communication**  
ABB Ability™ native network analyzers with complete communication protocols and I/O options for integration in any system.

### Intuitive interface

Touchscreen display and easy-to-access App-structured menu make network analyzers' configuration and operation simple and quick. Graphic color display for advanced visualization of the Class 0,5S accurate parameters, interactive pop-ups and complete notifications. Quick navigation is ensured by Homepage and favorite page setting.

### Full integration

Natively integrated in sub-distribution management System pro M compact InSite and ABB Ability™ Energy and Asset Manager cloud-solution. To allow monitoring, optimization and control of the complete electrical system. Wide integration in all main applications through embedded communication protocols (Modbus RTU, Modbus TCP/IP, BACnet/IP, Profibus DP V0).

### Smart commissioning

All M4M network analyzers are equipped with Bluetooth BLE module, ensuring smart configuration and quick visualization via unique EpiC commissioning tool, both available as mobile App and desktop software. Availability of remote firmware update regularly at any time guarantees the latest and the most secure version of the device with no impact on operations.

### Installation in any panel

Comfortable installation and secure fix on the panel is ensured by the easy-to-use clips, with different thickness setup for compatibility with any panel. One-hand mounting of the device thanks to the hooks on the housing. The reduced depth of only 57 mm inside the panel makes M4M suitable even in small-size switchboards.

### Fast installation and wiring

All terminals on M4M are removable, including the current transformers (CTs) inputs for current measurement, allowing to carry out the wiring directly on the terminals and speeding up the process. Moreover, the vertical disposition of the terminals makes the cabling inside the switchboard more comfortable.

### Rogowski coils compatibility

Specific M4M versions compatible with ABB's R4M Rogowski coils allow to retrofit in existing installations, integrating power quality metering with 0 downtime. The pre-wired terminals of R4M coils allow to save up to 70% time for current transformers cabling compared to standard CTs.

# Technical features

M4M 20

M4M 30

M4M 2X

## Auxiliary power supply

Voltage range	[V]	48 - 240 V AC/VDC $\pm$ 15 %	
Frequency	[Hz]	50 - 60	
Power consumption	[VA]	10 VA max	
Installation category		CAT III 300V class per IEC 61010-1 edition 3	
Protection fuse		T1 A - 277 VAC	

## Measurement accuracy

Measurement type		True RMS up to the 40 <sup>th</sup> harmonic 128 samples per cycle, zero blind		
IEC 61557-12		IEC 61557-12 PMD/S/K70/0,5		
Active energy		Class 0,5 acc. to IEC 61557-12 [*] Class 0,5S acc. to IEC 62053-22		
Reactive energy		Class 2 acc. to IEC 61557-12 Class 2S acc. to IEC 62053-23		
Active power		Class 0,5 acc. to IEC 61557-12		
Reactive power	Class 2 acc. to IEC 61557-12	Class 1 acc. to IEC 61557-12	Class 1 acc. to IEC 61557-12	
Apparent power		Class 0,5 acc. to IEC 61557-12		
Voltage		Class 0,2 acc. to IEC 61557-12		
Current		Class 0,2 acc. to IEC 61557-12		
Neutral current	Calculated	Class 0,2 acc. to IEC 61557-12	Calculated (2X, 2X PQ1, 2X RTS) Class 0,2 acc. to IEC 61557-12 (2X PQ2)	
Frequency		Class 0,1 acc. to IEC 61557-12		
Unbalances (Current, Voltage)		Class 0,2 acc. to IEC 61557-12		
Harmonics, THD (Current, voltage)		Class 1 acc. to IEC 61557-12		

## Voltage measurement inputs

Measurement range	[V]	50 - 400 V AC (L-N) 87 - 690 V AC (L-L)		
Measurement category		400V~ (CAT III)		
Rated frequency	[Hz]	50/60 Hz		
Max. VT Primary (indirect connection)	[V]	500 kV AC (L-N)		
Max over voltage	[V]	800 V AC (L-L)		
Protection fuse	[V]	T1 A - 277 V AC		

## Insulation characteristics

Test Voltage impulse @230V to accessible parts		6,4 kV 1,2/50 $\mu$ S		
Test Voltage impulse @400V to accessible parts		9 kV 1,2/50 $\mu$ S		
Test Voltage @230V to accessible parts		3 kV 60s @2000m		
Test Voltage @400V to accessible parts		3,6 kV 60s @2000m		

## Current measurement inputs

Number of current inputs	3 (L1, L2, L3)	4 (L1, L2, L3, N)	3 (2X, 2X PQ1, 2X RTS), 4 (2X PQ2)	
--------------------------	----------------	-------------------	---------------------------------------	--

M4M 20

M4M 30

M4M 2X

#### Indirect insertion with CT

CT rated secondary current	5 A (Class 0,5S) 1 A (Class 0,5S)
Max primary CT	50kA
Measurement range without accuracy derating	10 mA - 6 A
Starting current	1 mA
Burden	0,024 VA at 6 A

#### Indirect insertion with Rogowski coils

	M4M 20 Rogowski	M4M 30 Rogowski	-
Rated current	10.000 A	-	-
Measurement range without accuracy derating	100 A - 12 kA	-	-
Length of coils connections cable to M4M	3m	-	-
Starting current [A]	10 A	-	-

#### I/O

##### Digital Output

Voltage (min - max)	5 - 240 V AC/DC
Current (min - max)	2 - 100 mA
Max ON state drop voltage	1,5 V
Max R value at Min voltage conditions (5 V)	1750 Ohm
Min R value at Max voltage conditions (240 V)	2400 Ohm
Pulse duration [ms]	20 ms ON, 20 ms OFF
Pulse frequency	25 Hz
Alarm activation delay [s]	1 - 900 s (programmable)
Alarm return hysteresis	0 - 40 % (programmable)

##### Digital Input

Maximum voltage	240 V AC/DC
Max voltage for OFF state on input	20 V AC/DC
Min voltage for ON state on input	45 V AC/DC

##### Analogue Output

Programmable electrical span	Span [0 - 20 mA or 4 - 20 mA]	-
Load	Typical 250 Ohm, max 500 Ohm	-

#### Technical data for MID version

	M4M 20-M	M4M 30-M	-
MID standards		EN 50470-1, EN 50470-3	
Voltage measurement (type of network and rated voltage)		3Ph/4W - 3Ph/3W - 2Ph/3W - 1Ph/2W, 3 x 230 (400)...3 x 400 (690) V	
Current rating (I min- I ref(I <sub>max</sub> ))		0,01-1(6) A	
Rated frequencies		50 Hz and 60 Hz	
Tolerance on rated frequencies		+/- 2%	
Active Energy accuracy class		Class C	
Pulse value S <sub>0</sub> (pulse constant)		200000 imp/kWh	
Electromagnetic ambient conditions		Class E2	
Mechanical ambient conditions		Class M1	
LED indicator pulse frequency [s]		200000 imp/kWh	
LED indicator pulse length		1ms	

## Energy efficiency

### Network analyzers M4M 20, 30 and 2X

Technical features			
Type	M4M 20 - Class 0,5S	M4M 30 - Class 0,5S	M4M 2X
			
<b>Auxiliary power supply</b>			
Voltage range	[V]	48 - 240 VAC/VDC ±15%

#### M4M 20 - Rogowski version

M4M 20 is also available as compatible with ABB's R4M Rogowski coils for current measurement, increasing the flexi-bility of network analyzers offer and allowing retrofit in any existing installations.

M4M 20 Rogowski together with R4M Rogowski coils ensures the integration of basic power quality metering in any existing system with 0 downtime.

Communication protocol	I/O	Bbn 8012542 EAN	Order details		Weight 1 piece kg	Pack unit pc.
			Type	Order code		
BLE, Modbus RTU	2 Digital out.	070818	M4M 20 Rogowski	2CSG207081R4051	0,400	1

#### M4M 30

M4M 30 is ABB's network analyzer range that allows complete power quality analysis and energy efficiency evaluations.

Equipped with touchscreen color display for simplified access to the device and with Bluetooth module for smart commissioning.

Communication protocol	I/O	Bbn 8012542 EAN	Order details		Weight 1 piece kg	Pack unit pc.

## Energy efficiency

### Network analyzers

#### M4M 30 - Rogowski version

M4M 30 is also available as compatible with ABB's R4M Rogowski coils for current measurement, increasing the flexibility of network analyzers and allowing retrofit in any existing installations. M4M 30 Rogowski together with R4M coils ensure integration of complete PQ analysis in any existing system with 0 downtime.

Communication protocol	I/O	Bbn 8012542 EAN	Order details		Weight 1 piece kg	Pack unit pc.
			Type	Order code		
BLE, Modbus RTU	4 Progr. I/O	024613	M4M 30 Rogowski	2CSG202461R4051	0.400	1

#### R4M ROGOWSKI COILS

R4M Rogowski coils are flexible current transformer based on Rogowski technology, ideal to retrofit existing installations up to 12kA. Available in two different sizes (80mm or 200mm diameters), R4M coils are directly equipped with pre-wired removable terminals that perfectly fit M4M 20 Rogowski (3 Rogowski coil inputs) and M4M 30 Rogowski (4 Rogowski coil inputs), with no need for external integrators.

#### M4M 2X

M4M 2X is ABB's network analyzer range that ensuring higher flexibility to project specifications compared to standard network analyzers. M4M 2X is available without display, only communicating via protocols and Bluetooth module for smart remote commissioning.

### DMTME multimeters

DMTME

<b>1.3 mm</b>			
Auxiliary supply	[V rms]	230 +15% - 10%	DMTME, DMTME-72 and DMTME-96
	[V rms]	400 +15% - 10%	DMTME-72
	[V rms]	115 +15% - 10%	DMTME, DMTME-96
Frequency	[Hz]	45...65	
Power consumption	[VA]	<6	
Fuse protection		T0.1A	
<b>Voltage measuring inputs</b>			
Range	[V rms]	From 10 to 500 V AC phase to neutral; From 17 to 865 V AC phase to phase.	
Max. non destructive	[V rms]	550	
Impedance (L-N)	[MΩ]	>8	
<b>Current measuring inputs (only external CTs .../5 A)</b>			
Range	[A rms]	0.05...5	
Overload		1.1 permanent	
<b>Measurement accuracy</b>			
Voltage		±0.5% F.S. ±1 digit in range	
Current		±0.5% F.S. ±1 digit in range	
Active power		±1% ±0.1% F.S. from $\cos\varphi = 0.3$ to $\cos\varphi = -0.3$	
Frequency		±0.2% ±0.1Hz from 40.0 to 99.9 Hz	
		±0.2% ±1Hz from 100 to 500 Hz	
<b>Energy metering</b>			
Maximum metered value for single phase		4,294.9 MWh (MVarh) with $K_A = K_V = 1$	
Maximum metered value for three phase		4,294.9 MWh (MVarh) with $K_A = K_V = 1$	
Accuracy		Class 1	
Max. power consumption	[VA]	1.4 for each input (with $I_{max} = 5A$ rms)	
<b>Digital outputs</b>			
Pulse duration		50 ms OFF (min)/ 50 ms ON	
Vmax on contact		48 V (d.c. or a.c. peak)	
Wmax dissipation		450 mW	
Max frequency		10 pulses/sec	
I <sub>max</sub> contact		100 mA (d.c. or a.c. peak value)	
Insulation		750 Vmax	
<b>Programmable parameters</b>			
kVT transformer ratio $V_{prim}/V_{sec}$		1...500	
kCT transformer ratio $I_{prim}/I_{sec}$		1...1,250	
Free hour counter	[h]	0...10,000,000, resettable	
Countdown	[h]	1...32,000	
Operating temperature	[°C]	0...+50	
Storage temperature	[°C]	-10...+60	
Relative humidity		90% max. (non condensing) at 40°C	
Overall dimensions	[mm]	105x90x58	DMTME
	[mm]	96x96x103	DMTME-96
	[mm]	72x72x90	DMTME-72

## Energy efficiency

### DMTME multimeters

DMTME

#### DMTME multimeters

The instruments DMTME are digital multimeters that allow the measurement, in TRMS mode, of the principal electrical parameters in three-phase and single-phase 110/230/400 Vac networks, including the max/min/average detection of the main electrical parameters and the active and reactive energy count. The multiple measured variables are displayed locally on four red 7-segment LED displays providing easy readability and simultaneous display of the measures of the electrical parameters of the phases individually and of the whole network.

The instruments DMTME combine, in a single instrument, the functions of multiple devices: voltmeter, ammeter, power factor meter, wattmeter, varmeter, frequency meter, active and reactive energy meters; it allows remarkable financial savings thanks to the reduction of space taken up in the panel and also of time required for cabling, along with the advantage of providing clear readings on a single device.

The DMTME-I-485, DMTME-I-485-96 and DMTME-I-485-72 models are additionally equipped with two digital outputs, fully programmable as either pulse outputs for remote metering of energy consumption, or as alarm outputs. The output relay can be set as NO or NC. Communication over Modbus RTU protocol is possible through the RS485 serial port. All versions come complete with Mini CD containing the instruction manual, technical documentation, Modbus communication protocol and the DMTME-SW tool, intended to be a first-hand PC-based application for the remote visualization of the measures.

DMTME-96

#### DMTME modular multimeters

### IP Switches

IS/S 8.1.1

#### IP Switch, 8 Ports, Fast Ethernet, MDRC

NEW

The IP Switch is an industrial-grade, 8 Ports, Fast Ethernet (100 Mbit/s), unmanaged switch with plug-and-play capabilities, designed for installation in electrical distribution boards and small housings for rapid mounting on 35mm DIN rails (to EN 60715).

Description	Mod. width	Order details		Weight	Pack
		Type code	Order code	1 piece	unit
	8	IS/S 8.1.1	2CDG120082R0011	0.25 kg	1 pc.

ISP/S 8.1.1.1

#### IP Switch PoE, 8 Ports, Fast Ethernet, 55W, MDRC

NEW

The IP Switch PoE is an industrial-grade, 8 Ports, Fast Ethernet (100 Mbit/s), PoE (55 W), unmanaged switch with plug-and-play capabilities, designed for installation in electrical distribution boards and small housings for rapid mounting on 35mm DIN rails (to EN 60715).

Description	Mod. width	Order details		Weight	Pack
		Type code	Order code	1 piece	unit
	12	ISP/S 8.1.1.1	2CDG120083R0011	0.41 kg	1 pc.

## Energy meters

ABB EQ Meters. The details make the difference

## Energy efficiency

ABB EQ meters. The details make the difference.

### A series

#### Key applications

- Facility management installations
- Critical power
- Production lines
- System solutions
- Power quality
- Etc.

#### Key performance

Single phase or three phase

Direct connected up to 80 A or transformer current- and/or voltage transformers (CTVT)

Active energy measurement

- Class B (Cl. 1) or
- Class C (Cl. 0,5 S) on CTVT connected meters

Wide voltage range

- 100 - 690 V phase to phase
- 57,7 - 400 V phase to neutral

Alarm functions

MID (Module B and D)

Reactive energy measurement

Import/export measurement of energy

Optional communication

- via M-Bus or
- RS-485 (For Modbus RTU or EQ bus)

4 tariffs controlled by inputs,

- communication or
- built-in clock

Previous values by

- day or
- week or
- month

Demand measurement (per period)

- 3 maximum
- 1 minimum

Load profiles

- 8 channels independently configurable
- 40 000 values total

Harmonics measurement up to 16<sup>th</sup> harmonic

- Current
- Voltage
- and evaluation of THD

Pulse outputs (S0 compatible)

#### Instrumentation

The A series meters support reading of instrument values. A large number of electrical properties can be read.

Depending on version of the meter the following data is available:

- Active power
- Apparent power
- Reactive power
- Current
- Voltage
- Frequency
- Power factor
- Harmonics (Current and Voltage)
- Total harmonic distortion

### B series

#### Key applications

- Cost transfer/billing
- Solar power
- EV chargers
- Elevators/escalators
- Lighting
- Installation beside machines
- Etc.

#### Key performance

Single phase or three phase

Direct connected up to 65 A or CT connected (three phase types)

Active energy measurement

- Class B (Cl. 1) or
- Class C (Cl. 0,5 S) on CT connected meters

Alarm functions

MID (Module B and D)

Reactive energy measurement

Import/export measurement of energy

- Optional communication via via M-Bus or
- RS-485 (For Modbus RTU or EQ bus)

4 tariffs controlled by

- input or
- communication

Pulse outputs (S0 compatible)

#### Instrumentation

The B series meters support reading of instrument values.

A large number of electrical properties can be read. Depending on version of the meter the following data is available:

- Active power
- Apparent power
- Reactive power
- Current
- Voltage
- Frequency
- Power factor

### C series

#### Key applications

- HVAC applications
- Stand-alone applications
- Domestic applications
- Camping and Marinas
- Etc.

#### Key performance

Single phase or three phase

Very compact

- 1 & 3 modules.

Direct connected up to 40 A

Active energy measurement

Accuracy class 1

Alarm functions

MID (Module B and F) as option

Pulse output (S0 compatible)

#### Instrumentation

The C series meters support reading of instrument values. A number of electrical properties can be read:

- Power factor
- Active power
- Current
- Voltage

# Energy efficiency

## ABB EQ meters selection guide

### How do I select the best meter for my application?

There are many versions of ABB EQ Meters in order to meet your requests. The EQ program comprises meters with different functionalities such as tariffs, communication interfaces or advanced clock functions. Spend a little time to evaluate the functions and imagine how they could add extra value to your metering. For example, the input counter (from Silver level) on an EQ meter can be used to count products produced by a machine and be read out together with the energy consumption of the same machine. In one easy go you can allocate energy to any produced product from one source. Another useful function is previous values (from Gold level). If you charge users in intervals the meter can secure the data even in the event of a broken communication link. You can collect the correct interval data later and also make it visible for your counterpart immediately on the meters display in case of any discussions.

## Energy efficiency

### EQ meters A series

The A series meters ranges from single phase to three phase meters and from basic up to advanced functionality without any comparison. The A series meters are mounted on a DIN rail and are suitable for installation in distribution boards and small enclosures such as consumer units. With the main terminals in accordance with DIN 43857 and accessible from the below the meters, the A series is suitable for many applications.

The low rated or base currents of these products ensures high dynamic performance with superior accuracy even at low currents. The meters support a wide voltage range as well as a wide temperature range. The display is pixel-oriented and can display up to four quantities at the same time. Navigating the meter is easily done via the push-buttons below the display. To configure the meter settings, the set button must be accessed and this button is protected against unauthorized use when the "glass lid" on the front of the meter is closed and sealed. The exceptional low power consumption of the meters makes them economical in the long run - an important feature specially for large meter populations.

Data from the A series meters can be collected via pulse output or serial communication. The pulse output is a solid state relay that generates pulses proportionally to the measured energy. The meters can also be equipped with built-in serial communication interfaces for M-Bus or Modbus RTU (RS-485). All meters in the A series come with an infrared port for communication with an external Serial Communication Adapter (SCA) such as the KNX adapter.

A series supports following instrumentation val-

ues dependent on version of meter:

- Active energy
- Current
- Voltage
- Power factor
- Reactive power
- Total harmonic distortion
- Apparent power
- Frequency
- Harmonics

A series meters with a functionality level of Gold or Platinum have an internal clock for advanced functionality:

- Event log
- Previous values
- Load profile
- Maximum and minimum demand

The tariffs are controlled via inputs, via communication or via an internal clock in Gold and Platinum versions.

The A series support up to four I/O's. It can be two inputs and two outputs in a fixed configuration or four I/O points that are freely configured to input or output. Inputs can be used for counting pulses from e.g. a water meter, or reading status from external devices. Outputs can be used as pulse outputs or controlling external apparatus like

a contactor or an alarm (connected via an external relay). The I/O's need an external voltage supply. The A series meters are type approved according to IEC and they are both type approved and verified according to MID. MID is the Measuring Instruments Directive 2014/32/EU from the European Commission. MID type approval and verification is mandatory for meters in billing applications within EU and EEA. The type approval is according to standards that covers all relevant technical aspects of the meter. These include climate conditions, electromagnetic compatibility (EMC), electrical requirements, mechanical requirements and accuracy.

### ABB EQ meters A series

A series

Technical features		
<b>Outputs</b>		
Type	Transistor or MOSFET	
Current	2 - 100 mA	
Voltage	5 - 240 V AC/DC. For meters with only 1 output, 5 - 40 V DC.	
Pulse output frequency	Programmable: 1 - 999999 imp/kWh	
Pulse length	Programmable: 10 - 990 ms	
Terminal wire area	0.5 - 1 mm <sup>2</sup>	
Recommended tightening torque	0.25 Nm	
<b>Inputs</b>		
Voltage	0 - 240 V AC/DC	
OFF	0 - 5 V AC/DC	
ON	57 - 240 V AC/24 - 240 V DC	
Min. pulse length	30 ms	
Terminal wire area	0.5 - 1 mm <sup>2</sup>	
Recommended tightening torque	0.25 Nm	
<b>EMC compatibility</b>		
Impulse voltage test	6 kV 1.2/50 μs (IEC 60060-1)	
Surge voltage test	4 kV 1.2/50 μs (IEC 61000-4-5)	
Fast transient burn test	4 kV (IEC 61000-4-4)	
Immunity to electromagnetic HF-fields	80 MHz - 2 GHz at 10 V/m (IEC 61000-4-3)	
Immunity to conducted disturbance	150 kHz - 80 MHz, (IEC 61000-4-6)	
Immunity to disturbance with harmonics	2kHz - 150kHz	
Radio frequency emission	EN 55022, class B (CISPR22)	
Electrostatic discharge	15 kV (IEC 61000-4-2)	
Standards	EC 62052-11, IEC 62053-21 class 1 & 2, IEC 62053-22 class 0,5 S, IEC 62053-23 class 2, IEC 62054-21, GB/T 17215.211-2006, GBT 17215.321-2008 class 1 & 2, GB/T 17215.322-2008 class 0,5 S, GB 4208-2008, EN 50470-1, EN 50470-3 category A, B & C EQ meters.	
<b>Mechanical</b>		
Material	Polycarbonate in transparent front glass, bottom case, upper case and terminal cover, Glass reinforced polycarbonate in terminal block.	
<b>Dimensions</b>		
	<b>A41 / A42</b>	<b>A43 / A44</b>
Width	70 mm	123 mm
Height	97 mm	97 mm
Depth	65 mm	65 mm
DIN modules	4	7

## Energy efficiency

### EQ meters B series

The EQ meters, B series is a range of meters for single phase and three phase metering. The B series meters are mounted on a DIN rail and are suitable for installation in distribution boards and small enclosures such as consumer units. The B series are suitable in applications where there is a need for reliable energy measurements and where space is limited.

The low rated or base currents of these products ensures high dynamic performance with superior accuracy even at low currents. The B series meters are meters for many applications and installations. Navigating the meter is easily done via the push-buttons below the display. To configure the meter settings, the set button must be accessed and this button is protected against unauthorized use when the "glass lid" on the front of the meter is closed and sealed. The exceptional low power consumption of the meters, less than 0.9 VA and 1.6 VA, makes them economical in the long run - an important feature specially for large meter populations.

Data from the B series meters can be collected via pulse output or serial communication. The pulse output is a solid state relay that generates pulses proportionally to the measured energy. The meters can also be equipped with built-in serial communication interfaces for M-Bus or Modbus RTU (RS-485). All meters in the B series come with an infrared port for communication with an external Serial Communication Adapter (SCA) such as the KNX adapter.

The B series meters support reading of instrument values. A large number of electrical properties can be read. Depending on version of the meter the following data is available:

- Active power
- Apparent power
- Reactive power
- Current
- Voltage
- Frequency
- Power factor

Up to 4 tariffs are controlled via inputs or communication.

The B series support two inputs and two outputs in a fixed configuration. Inputs can be used for counting pulses from e.g. a water meter, or reading status from external devices. Outputs can be used as pulse outputs or controlling external apparatus like a contactor or an alarm (connected via an external relay).

The B series meters are type approved according to IEC and they are both type approved and verified according to MID. MID is the Measuring Instruments Directive 2014/32/EU from the European Commission. MID type approval and verification is mandatory for meters in billing applications within EU and EEA. The type approval is according to standards that covers all relevant technical aspects of the meter. These include climate conditions, electromagnetic compatibility (EMC), electrical requirements, mechanical requirements and accuracy.

## Energy efficiency

### EQ meters C series

C series

The EQ meters, C series are truly compact meters for single phase and three phase metering. The C series is mounted on a DIN rail and is suitable for installation in distribution boards and small consumer units.

Only one or three module wide, the C series is a very compact meter for single phase and three phase applications. The meters have an LCD with large digits showing energy register and instrumentation values. The meters have a wide temperature range which makes it possible to install the meters in many locations. Navigating the meters are easily done via the push-button below the display. The exceptional low power consumption of the meters, less than 0,3 W and 0,6 W at 230 V AC, makes them economical in the long run - an important feature specially for large meter populations.

The C series meters support reading of instrument values. A number of electrical properties can be read:

- Power factor
- Active power
- Current
- Voltage

The C series meters have an output that can be used as pulse output or alarm output. The alarm quantity and levels is easily configured on the meter with the push button. The output can be used for controlling external apparatus like a contactor or an alarm indicator (connected via an external relay).

The C series meters are type approved according to IEC and MID. MID is the Measuring Instruments Directive 2014/32/EU from the European Commission. The type approval is according to standards that covers all relevant technical aspects of the meter. These include climate conditions, electromagnetic compatibility (EMC), electrical requirements, mechanical requirements and accuracy.

MID versions have initial verification according to annex F of the Measuring Instruments Directive.

### Interfaces for EQ meters

ZS/S 1.1

#### Meter Interface Module, KNX

It records consumption and measured values of the electrical energy consumption meters. Using an infra-red interface, the ABB energy meter types of the A- and B-series are incorporated. The information and data which is read can be used, for example, for cost centre accounting, energy optimisation, monitoring of installations and visualisation.

MG/S 11.100.11

#### Modbus RTU Client - KNX TP Gateway, 100 Points, MDRC

The Modbus KNX Gateway integrates Modbus RTU server devices with KNX installations at field level. The devices support standard KNX data points (DPT) and up to 100 data points. The device is put into operation with the ETS. An optional, free-of-charge ETS app (DCA) is available to facilitate the configuration, allowing to export, and import Modbus-KNX mapping in the form of templates. Modbus component templates will also be available for download from a database. Auxiliary voltage is not required.

### EQmatic

QA/S 3.xx.1

#### Energy Analyzer, M-Bus, MDRC

Compact and web-based stand-alone devices for energy management applications. For monitoring, logging, displaying and analyzing consumption data of up to 16 or 64 electricity, gas, water or heat meters via M-Bus. Automatic detection for ABB EQ meters (A/B-Series). Access to the device via web browser. The user interface provides graphical analysis functions, e.g. dashboard, historical data, instantaneous values, benchmark functions, cost allocation according to consumer groups and more.

Description	Bbn 4016779	Order details		Weight 1 piece	Pack unit
		EAN	Type code		
16 Devices	997751	QA/S 3.16.1	2CDG110226R0011	0.15	1

QA/S 1.16.1

#### Energy Analyzer, KNX, MDRC

Compact and web-based stand-alone device for energy management applications. For monitoring, logging, displaying and analyzing consumption data of up to 16 electricity, gas, water or heat meters via KNX TP. In addition measured values such as temperature, humidity, etc. can be processed and displayed. The alarm function allows early warning via E-mail if any value exceeds defined limits. The user interface provides graphical analysis functions, e.g. dashboard, historical data, instantaneous values, benchmark functions, cost allocation according to consumer groups and more. In order to increase energy efficiency, defined loads can be selectively switched off with the load control function if they exceed a load limit. For further processing data can be exported via E-mail or upload to FTP server. Several data sharing options allow communication with other systems.

## The evolution of the InSite system

Range comparison for optimal product selection

### SCU100

Technical feature	Description
Number of connectable devices (CMS sensors, IO modules, smart aux/sign)through CMS flat cable	Up to 96
Smart signal/auxiliary contact connection	no
Number of integrable Modbus devices	Up to 16 (RTU or TCP/IP)
Max current measurable directly by an InSite device	Depending on the 5A current transformers connected to the control unit
Number of Modbus RTU interfaces	2
Wi-Fi connection	no
Power supply	AC
Expandable memory storage	no

#### RECOMMENDED APPLICATIONS

Industrial

Data Centers

Large Commercial

#### SUITABLE FEATURES

- **Higher number of loads** monitored through sensors by a single control unit
- Wired connection to LAN that empowers **cybersecurity**
- **Higher mains current magnitude measurement** thanks to 5A current transformers

## The evolution of the InSite system

Range comparison for optimal product selection

Technical feature	Description
Number of connectable devices (CMS sensors, IO modules, smart aux/sign)through CMS flat cable	Up to 32
Smart signal/auxiliary contact connection	yes
Number of integrable Modbus devices	Up to 32 (16 RTU + 16 TCP/IP)
Max current measurable directly by an InSite device	80A
Number of Modbus RTU interfaces	1
Wi-Fi connection	yes
Power supply	AC and DC
Expandable memory storage	Yes (SD card)

### RECOMMENDED APPLICATIONS

Residential

Telecom and  
unmanned substations

Small Commercial

### SUITABLE FEATURES

- **Reduced dimensions**
- **Wi-Fi connection**
- **Higher number of Modbus devices** that can be connected to one control unit
- **Smart signal/auxiliary contact** available
- **DC power supply** possible

# InSite energy management system - SCU100

## Connected solution for sub distribution

The InSite energy management system allows you to collect data from field devices in electrical distribution, as well as control and automate them through the use of accessories. Specifically recommended for large commercial and industrial applications, the SCU100 control unit is capable of simultaneously gathering measurement data from up to 16 energy and power meters, as well as 96 current sensors and digital sensors.

Thanks to its modular system, InSite is designed to easily upgrade new and existing installations, reducing installation and configuration time to near zero and minimizing disruption and costly downtime.

In addition to the current sensors, the range is complemented by a selection of Digital Input and Output Modules that can be easily connected to ABB System pro M compact® protection devices and accessories, as well as to pulse meters such as gas or water meters to collect consumption data.

Based on a variety of data, the available functionalities range from simple monitoring of the plant to analysis of historical data, customized alarms and implementation of automatic measures to reduce energy consumption. Reduce energy consumption, identify potential risks and ensure business continuity.

## What to include in the panel:

- 1 Control Unit
- 2 Digital I/O modules

### 1 Control Unit SCU-100

Single access point in the sub distribution board, data aggregator and collector from field devices

4<sup>th</sup> port for Modbus RTU to enable connection of meters

Firmware upgrade to communicate with:

- Classic accessories connected through I/O modules
- Sensors, energy and power meters in Modbus RTU
- Current sensors

LEDs for visual understanding of correct /uncorrect installation and functioning

Internal power supply to enable communication and correct functioning of sensors and I/O modules

Modbus TCP/IP and RTU to communicate to supervision system, enabling remote availability of collected data

### 2 Digital Input/Output modules DM00, DM10, DM11

- Connect in the connectivity system classic accessories from existing and future ABB ranges and 3rd party ranges.
- Compatibility with water/gas/heat meters with pulse outputs
- Input to receive data from hard wired connecte devices (accessories, meters)
- Output to act on connected accessories

Connection to InSite bus via same type of connectors as existing sensors

Assignment of ID address via dedicated button and analogous procedure as for sensors

No external power supply to enable communication and correct functioning

Visual indication of correct installation and functioning

Screwless terminals to ease installation procedure

### System pro M compact® InSite

#### SCU100

The SCU100 is capable of collecting measurements and information from up to 16 energy and power meters, in addition to 96 current sensors and digital channels, all simultaneously. It calculates the energy and number of operations at single line level and compares stored values by period or by device.

Remotely monitoring of the system is made possible by a digital communication that supports different protocols: Modbus RTU, TCP or SNMP v1 and v2 and the encrypted v3.

Its built-in web server offers intuitive access to the measured data, the configuration settings and the system parameters, providing one unique interface for both operations and commissioning process. The two interfaces – LAN (TCP/IP or Modbus TCP) and RS485 (Modbus RTU) – guarantee straightforward integration into any IT infrastructure. What's more, the data can be read out by means of an encrypted SNMP protocol.

The Control Unit SCU100 has been specifically develop to meet requirements of energy and asset monitoring and control in panelboards. In a framework where energy efficiency and operations continuity are becoming crucial, SCU100 offers the possibility to reduce wastes and identify risky situations promptly.

#### Digital Input and Output modules – DM11, DM00, DM10

The range of digital Input and Output Modules consists of 3 devices to adapt to quantity and type of installed products: Input Module DM11, Output Module DM00 and Input/Output Module DM10.

They can be connected to System pro M compact® accessories of MCBs and RCDs, but also to other DIN-Rail products with a digital input or output and to pulse meters (e.g. water, gas meters). They can read contact status, activate or deactivate lines and collect utilities consumptions.

ABB ranges compatible with I/O Modules are:

Molded Case Circuit Breaker	
Tmax XT	
Molded Case Circuit Breaker	Residual Current Devices
S 200	RCCBs – F 200
SN 201	RCD-blocks – DDA 200, DDA 800
S200 80-100A	RCBOs – DS 201, DS 202, DS 203, DS 200, DS800
S 750 DR	eRCBOs – DSE, DSN
S 700	
S 800

### System pro M compact® InSite

#### Accessories

The Control Unit needs a flat cable to gather information from current sensors and digital I/O modules. The flat cable should be a 4-pin cable, flexible in length. Devices can be placed at customizable distances required by the specific application.

## InSite energy management system

### The evolution of the system

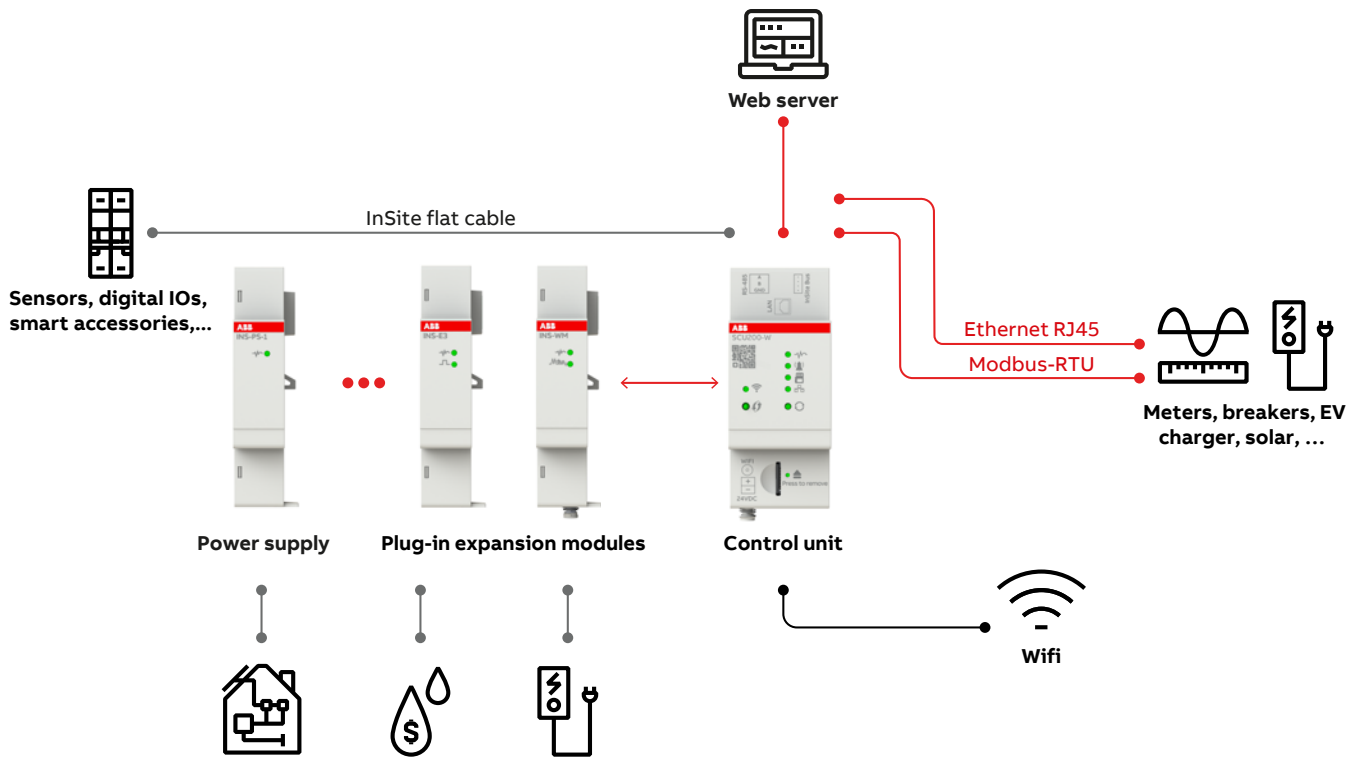

The InSite system takes smart energy and load management to the next level, providing a complete solution to optimize energy usage in both sub and final distribution. Through the compact control unit SCU200, data is gathered from the field devices, and then can be accessed via the InSite web server, the ABB Ability™ Energy & Asset Manager or any third-party application.

The new plug-in expansion modules allow the system to be adapted even better to the respective application needs.

Depending on measurement and optimization goals, Wireless M-Bus and Energy Meter modules can be used and plugged to the control unit without tools.

With more automation logics available, load prioritization is optimized, enabling the most efficient use of energy in any residential, commercial or industrial space. And thanks to the openness to third-party integration, loads such as heat pumps, Electrical Vehicles chargers or energy storage units can also be easily connected to the system, further increasing the potential for energy savings.

The integrated InSite web server has evolved to now include a cost calculation feature, a step-by-step installation wizard and advanced options for setting automated actions to control loads in residential, commercial and industrial buildings, enabling energy savings of up to 20%.

# InSite energy management system

## Control Unit

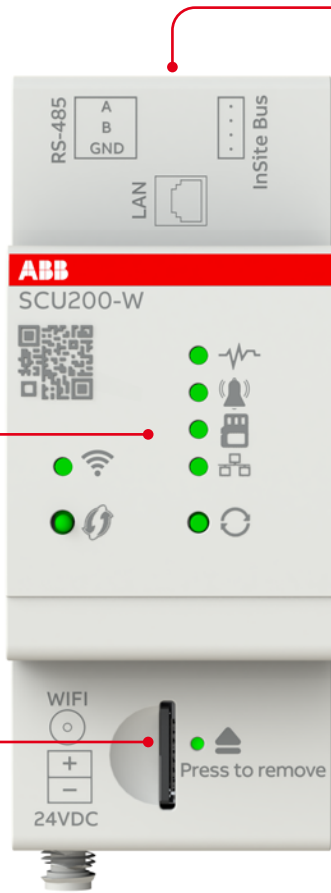

### 01 Control Unit

#### SCU200 / SCU200-W

**LED lights** for at-a-glance information about device status and connectivity

**Embedded Wi-Fi antenna** for the wireless connectivity of the system to the LAN but also to access the WebUI and to integrate wireless devices through access point mode

**Micro SD card memory slot**

**3 ports for up to 64 devices connected:**

- 1) Ethernet RJ45 port - Modbus TCP:**  
Connectivity of up to 16 TCP devices of any kind (meters, breakers, EV chargers, solar, ...)
- 2) RS485 port – Modbus RTU:**  
Connectivity of up to 16 RTU devices of any kind (meters, breakers, EV chargers, solar, ...)
- 3) InSite bus port:**  
Connectivity of up to 32 devices, whether they are CMS sensors, I/O modules, or smart accessories

**SMA connector:**  
for external Wi-Fi antenna if needed

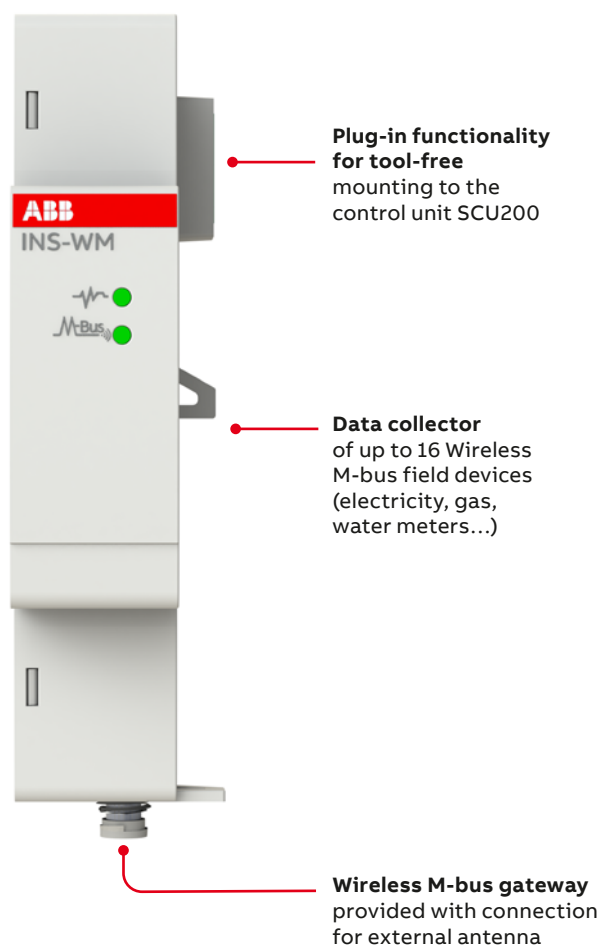

## InSite energy management system

Plug-in expansion modules

### 02 Energy meter with split-core current transformers

### 03 Wireless M-bus

## InSite energy management system

Plug-in expansion modules

### 04 Power supply module

Conversion from 240 Va.c. to 24Vd.c., up to 15W output to power the complete InSite system

**Plug-in functionality**  
for tool-free mounting to  
the control unit SCU200

**Up to 5 modules can be  
connected to the control unit  
(SCU200);** depending on the type  
of modules connected, proper  
power supply should be selected

## InSite energy management system

USB module and Smart signaling auxiliary contact

### 05 USB module

100mA USB port for the connection of P1 smart meters (energy, gas, water)

Plug-in functionality for tool-free mounting to the control unit SCU200

500mA USB port future additional integrations requiring USB connection

### 06 Smart signaling auxiliary contact

InSite bus port for a fast connection to SCU200 through CMS flat cable

Pushbutton for an immediate assignment in the SCU200 web server

Embedded sensors for measurement of internal temperature of MCBs

Design compatible with both pin and fork busbars

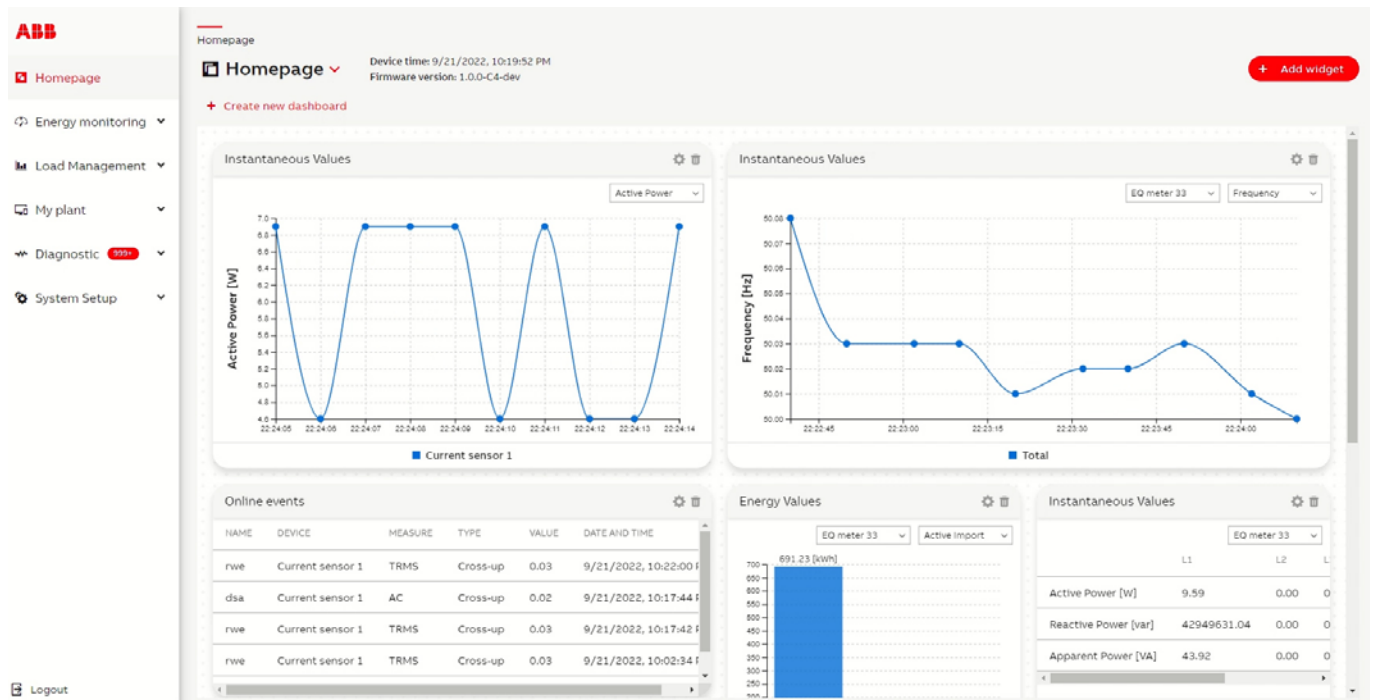

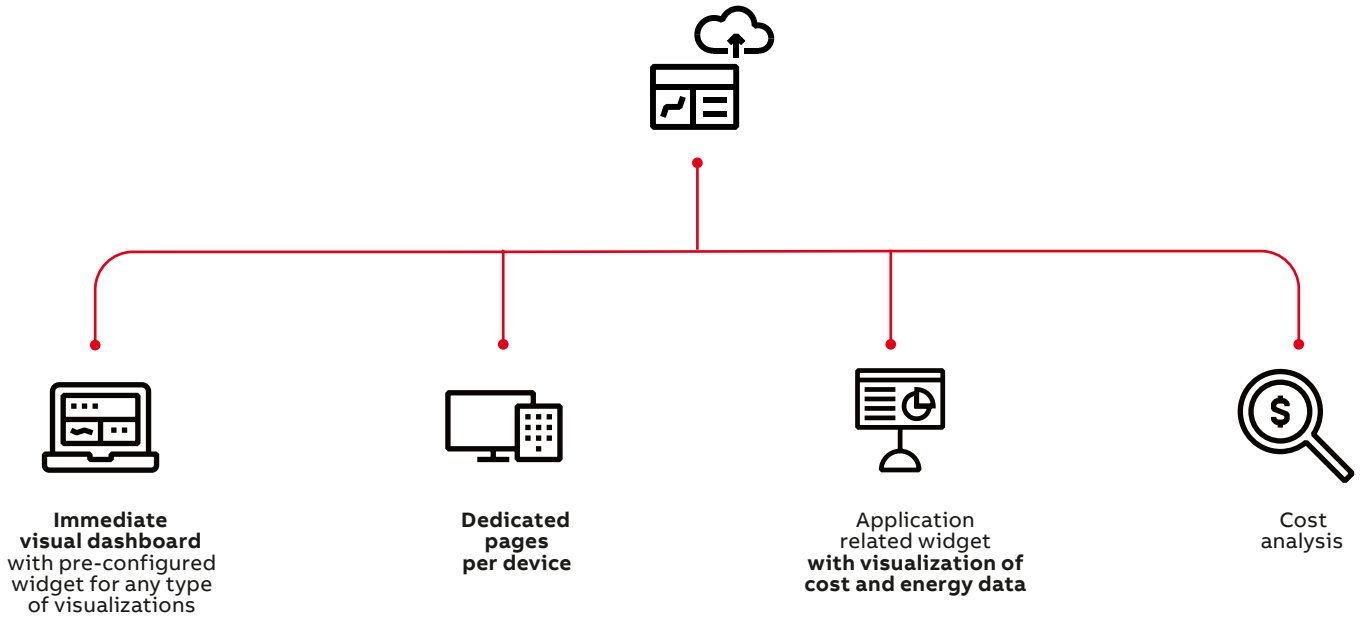

# InSite web server

## Highlights

Once the system is installed, it can be connected to the integrated InSite web server with automatic device recognition. It provides remote access to data transmitted of the field devices, as well as a step-by-step

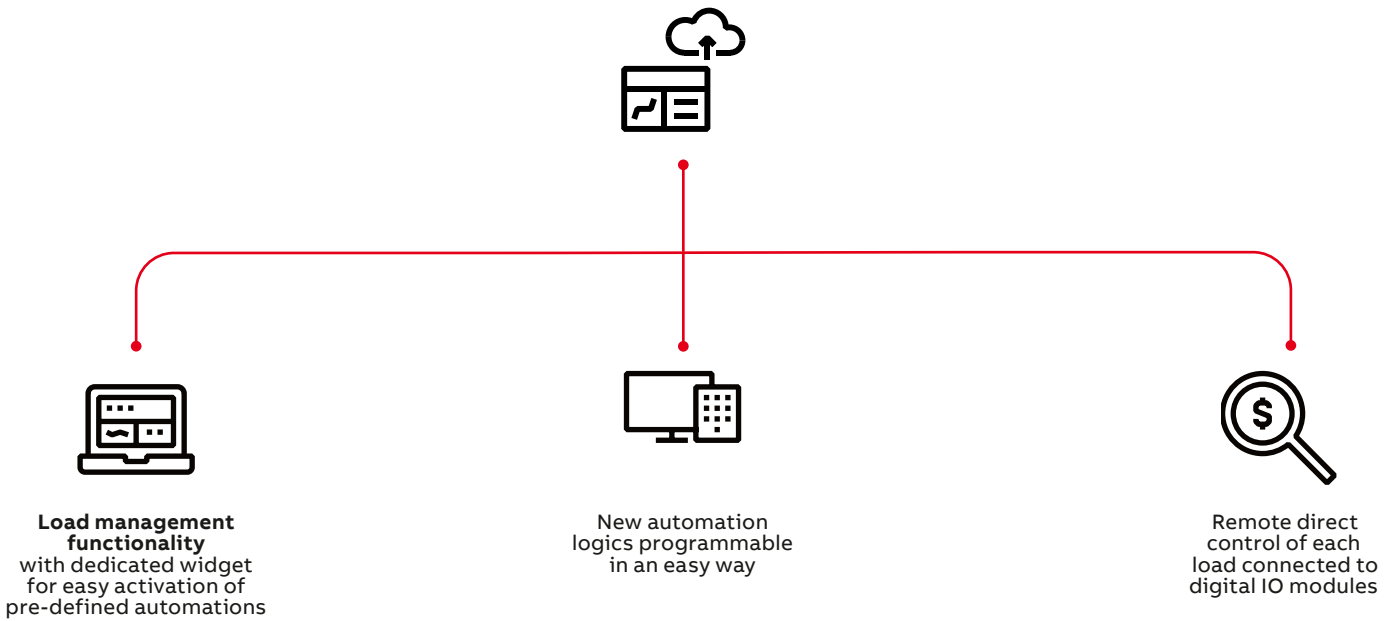

installation wizard, a cost calculation feature, and automated actions to optimize the prioritization of loads for the most efficient use of energy.

## Energy efficiency

### CMS – Circuit Monitoring System overview

The quality of a Circuit Monitoring System is dependent on the strengths of the individual components and how well they interact. ABB's new CMS sets new and high standards. Compactness,

technology, measurement results, user friendliness and flexibility - every component and every feature of the CMS has been fully optimized in terms of practicality and functionality.

**Example illustration:**  
Control Unit CMS-700 in combination with CMS open-core sensors

CMS-600

CMS-700

CMS-660

**CMS bus interface**  
Each bus interface allows up to 32 sensors connected to the Control Unit:  
CMS-700: up to 96 sensors (3x32)  
CMS-600: up to 64 sensors (2x32)  
CMS-660: up to 32 sensors (1x32)

#### Control Units

The control unit evaluates the measurement data picked up by the sensors, and makes it available via the provided interfaces.

Three different units are available depending on the application: CMS-700, CMS-660 and CMS-600.

## Energy efficiency

### CMS – Circuit Monitoring System overview

#### Connection technology

Connecting the sensors to the Control Unit is extremely simple and requires no special tools. All sensors are connected to the Control Unit by means of a flexible flat cable and insulation displacement connectors. The positioning of sensors is fully customizable so that they sit exactly where a measurement is required.

#### Sensors

CMS sensors can be placed anywhere in the system, without any limitation. Easy initializing is guaranteed by the unique ID assigned to each sensors via Control Unit in just a few simple steps. All measurement functions are available right after commissioning.

#### Serial interfaces

Depending on the selected control unit, the following communication interfaces are available: RS485 (Modbus RTU), LAN (TCP/IP and Modbus TCP), SNMP v1/v2 and v3 encrypted.

The web server integrated in the CMS-700 makes it possible to display the values via any Internet browser and to automatically export the files (via e-mail or FTP server).

# Energy efficiency

## Circuit Monitoring System

**Integrate however you want thanks to multiple mounting options.**

Depending on the application, you can choose between two sets of sensors - one specifically designed for ABB installation devices, the other with an universal design to be installed on cables or DIN-rail.

### Sensors for ABB devices

**System pro M installation, SMISLINE**  
The sensors of the CMS-120LA and CMS-120FH series allow easy retrofit installation on S200 MCBs, SMISLINE devices and E90 fuseholders (1000VDC).

**Installation on S800 installation devices**  
CMS-100S8 and CMS-200S8 series sensors can be mounted on all S800 high performance circuit breakers with cage terminals.

### Universally usable sensor designs

**Mounting on a DIN rail**  
CMS-120DR, CMS-100DR, and CMS-200DR series sensors can be mounted on all DIN rails with the aid of a DIN rail mounting.

**Cable tie mounting**  
If space is at a real premium, CMS-120CA, CMS-100CA, and CMS-200CA series sensors can be secured directly to the cable(s) to be measured by means of cable ties.

## Energy efficiency

### Circuit Monitoring System

#### Tangible value added for you

#### ABB circuit monitoring pays off twofold

#### Early warning system (predictive maintenance) for increasing the availability of critical consumers

Continuous monitoring of the current flow at the circuit breaker makes it possible to detect overloaded lines before they lead to a service interruption. Apart from this, monitoring individual circuits indicates whether the loads are in the desired operating mode or not. In this way, system deviations can be ascertained instantaneously. What's more, the CMS can be used to detect unbalanced loads before they result in failure of the neutral conductor and consequently load failure.

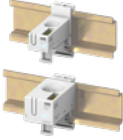

#### Cost analysis to reduce and assign energy costs

The cost of energy will rise continuously. In order to cut costs, you first have to know where they arise. The Control Unit helps illustrate and analyze the instantaneous energy consumption levels. Furthermore, the calculated active energy can be used to roughly allocate the costs at the output level.

## Energy efficiency

### Control units

#### CMS-700

CMS-700  
User Manual

#### CMS-700

The CMS-700 measures the AC and DC currents in the outgoing circuits via up to 3 x 32 sensors and calculates the energy and output data (line-side active and reactive power) of up to 96 sensors simultaneously.

Remotely monitoring of the system is made possible by a digital communication that supports different protocols: Modbus RTU, TCP or SNMP v1 and v2 and the encrypted v3. The Control Unit CMS-700 stands out thanks to its built-in web server that offers easy access not only to the measured data but also to the system parameters. The two interfaces – LAN (TCP/IP or Modbus TCP) and RS485 (Modbus RTU) – guarantee straight-forward integration into any IT infrastructure. What's more, the data can be read out by means of an encrypted SNMP protocol.

The Control Unit CMS-700 has been developed specifically to meet the requirements of critical power applications, such as those of computing centers. In addition, however, professional energy monitoring is becoming ever more important when it comes to identifying savings potentials in functional buildings such as office buildings.

#### CMS-600

CMS-600  
User Manual

#### CMS-600

The CMS-600 system enables you to measure AC and DC currents in up to 64 branches. For simple and fast operation, the Control Unit is equipped with an illuminated touch display that makes not only initialization but also control of the sensors extremely simple.

A 2-wire RS485 Modbus RTU interface enables users to remotely query and process the measurement data. As such, the CMS-600 Control Unit can be very easily integrated into an existing Modbus architecture. As an option, the measured values can also be visualized and processed by means of a programmable logic control (PLC).

CMS-600 is equipped with an integrated CMS software for which great care has been taken to ensure that the navigation concept is highly intuitive

The Control Unit CMS-600 are put to use in the critical power systems of hospitals and in similar industrial applications, too. Furthermore, these devices can also be found in functional buildings such as airports, hotels, office buildings, universities/colleges and museums or in industrial photovoltaics.

## Energy efficiency

### Sensors and Accessories

Open-core sensors  
Installation manual

#### Open-core sensors

The open-core sensors are able to measure all types of current, whether AC, DC or mixed, up to 80 A in TRMS, enabling exact and effective measurements. As each sensor is equipped with its own microprocessor for processing the signal, the measurement data is transmitted digitally to the Control Unit via bus interface, maximizing data reliability. Disturbances like those experienced with analog data now most definitely belong to the past.

With this solution a faster cabling is guaranteed, since wiring cables are directly inserted in the sensors without the aid of a screwdriver. No special tools are needed for the entire connection process.

With AC accuracy\* of  $\leq \pm 1.0\%$ , they can be used in a multitude of applications without any problem: System pro M, DIN rail and Cable tie.

Thanks to their U shape, the open-core sensors can be retrofitted to existing installations, without the need to disconnect the cabling or shut down the equipment, being the key for brownfield extension.

#### Solid-core sensors

Alternating (AC), direct (DC) or mixed (TRMS) currents – the CMS sensors monitor and measure all types of current over a measurement range of up to 160 A (TRMS). They even measure harmonic components in the signal curve. The measurements are digitally transmitted through bus interface, enabling reliability of data and removing disturbance effects.

Maximum secure insertion of wiring cables is guaranteed by this sensors solution.

Everything is built into an 18 or 25 mm wide unit to enable precise and effective measurements. This makes these CMS sensors the most compact and most powerful on the market.

Depending on the application, solid-core sensors are chosen between up to four different mounting options to making this solution as flexible as possible.

The solid-core units feature an enclosed structure and AC measurement accuracy\* of  $\leq \pm 0.5\%$ , and are therefore suitable for all applications in which maximum-precision measurement is crucial.

\* All accuracy specifications refer to the relevant full-scale value and apply to 25 °C.

#### Accessories

The Control Unit of the circuit monitoring system need a flat cable for receive branches measurements from sensors. The flat cable should be a 4-pin cable, flexible in length. Flat cable are available in several lengths in order to cover the most kind of application. Cables with the greater length are designed with the purpose of being adapted, through cutting, to the various lengths required by the applications.

# String monitoring

## CMS-660 circuit monitoring system

### Extreme flexibility

The number (up to 32) and positioning of the sensors is fully customizable, ensuring the highest flexibility in integration to different system conditions.

### Up-to-date system status

CMS-660 immediately detects unusual system status (e.g. solar shading, over-voltages, breaker trip, high temperature), facilitating maintenance of the system.

### User friendliness

Local information, thanks to the LEDs, about network and device status. Reset button to easily set the device.

### Compatibility

RS485 port to guarantee easy integration with the plant / inverter monitoring systems.

### Smart commissioning

Thanks to the intelligent, intuitive configuration, the CMS system can be configured and put into operation in just a few minutes.

### One sensor for all currents and strings

Direct, alternating or mixed – in a wide measuring range up to 80A, allowing the combination of two strings into one solid-core sensor.

## Energy efficiency

### String monitoring CMS-660

#### Circuit monitoring system for PV applications

The CMS string monitoring increases the efficiency of photovoltaic systems by detecting failures on PV strings. With the easy-to-integrate system you can immediately detect unusual system status, e.g. defective strings, over-voltages, breaker trips or high temperatures, enabling you to quickly implement appropriate countermeasures.

#### Key features:

- Current and temperature measurement directly from the sensors
- Monitoring of two strings can be combined into one single CMS solid-core sensor
- Integration of SPD and Switch disconnecter status via 2 digital inputs
- Up to 32 flexible monitoring points, placed where measurement is required
- LEDs provide local information about network and device status.
- Modbus RTU protocol guarantees easy integration into plant or inverter monitoring systems
- Connection technology is extremely simple and requires no special tools

#### Control unit – CMS-660

Main technical specification		CMS-660

### Modular digital instruments

VLMD

#### Modular digital instruments

The wide range of modular digital instruments starts with single-phase mono-function measurement devices for measuring voltage, current.

The range is composed by a voltmeter for a.c./d.c. voltage monitoring, one ammeter for a.c. current. Ammeters measure in indirect insertion thanks to measuring accessories, like current transformer for a.c. and shunt for d.c.

The full-scale value is programmable by the user, according to the current flow on the primary windings.

Version	Bbn	Order details		Weight	Pack

a.c./d.c. digital voltmeter	620402	VLMD-1-2	2CSM110000R1011	0,300 kg	1 pc.
a.c. digital ammeter	620501	AMTD-1	2CSM320000R1011	0,300 kg	1 pc.

AMTD

#### Modular digital instruments with alarm relay

The range is widened by two additional devices with extended features: two ammeters, trip the internal relay to signal an alarm condition if the measured parameter exceeds or falls below a programmable threshold. The measured maximum and minimum peak values are stored in the non-volatile instrument's memory.

The contact type is NO, so that the contact is open when the instrument is powered off, but it is possible to obtain positive safety operation setting, directly on the instrument, the NC relay contact type.

The instrument with relay can be used to signal the exceeding or the fall below a certain threshold, but not for both functions simultaneously.

#### Analogue instruments with scales

The range of mono-function analogue instruments, employable in single-phase networks, is composed of measurement devices performing the measure and visualization of one electrical parameter: voltage, current and frequency.

The range of voltmeters, both in modular and front-panel versions, is composed by devices fully equipped with the proper scale, even when the use of a voltage transformer is required. The connection, whether it's direct, allows the immediate visualization of the measures on the display.

The range of ammeters is composed of devices for direct and indirect connection to the network. The devices directly connected to the network are fully equipped with proper scale, while the devices that require a current transformer or a shunt, need to be combined with a separate scale to be mounted on the front of the instrument.

The wide range of scales for ammeters allows the employability of the latter even in application with high nominal current, up to 10000 A a.c.

Standards		EN 60051	

The range of modular analogue instruments is composed by mono-function measurement devices employable in single-phase networks. It includes voltmeters, ammeters and frequency meters. In particular, the range of ammeters is composed of devices fully equipped with the appropriate scale in the range between 5 A and 30 A. In case of greater current values, the range features devices to be used together with the proper scale and CT according to the application.

Accuracy class		1.5 (0.5 for frequency meters)
Overload capacity ①		
- ammetric windings		up to $I_n \times 10 / < \text{sec.}$ up to $I_n \times 2 / \text{permanent}$
- voltmetric windings		up to $U_n \times 2 / < 5 \text{ sec.}$ up to $U_n \times 1.2 / \text{permanent}$
Operating temperature	[°C]	-10...+55
Storage temperature	[°C]	-40...+70
Average and max. relative humidity (DIN 40040) ②		65% (yearly average) 85% (+35 °C/60 days a year)
Vibration resistance (IEC 50-1)	[g (9.81 m/s)]	0.08-1.8 (0.35 mm/10-55 Hz; 3 axis/6 h)
Degree of protection		
		IP52 indoors
		IP00 on the terminals (IEC 144. DIN 40050)
		IP20 with suitable terminal covers
Materials		
- cases and front edge		self-extinguishing thermosetting material in accordance with UL94 V-0, fungus and termite resistant
- pointers (DIN 43802) ③		molded aluminium
- terminals		brass
Assembly		
Dimensions W x H x D (DIN 43700/43718)	[mm]	48 x 48 X 53 72 x 72 x 53 96 x 96 X 53
Applicable standards		
		IEC EN 61010-1

① The overload can be greater for instruments enabled by a CT because the transformer generally keeps secondary current peaks to within 10 In.

② Tropicalization enables the instruments to withstand up to 95% max. relative humidity (+35 °C/60 days). In accordance with DIN standard 40040, they must be protected against any penetration of humidity inside the device. Terminals, screws, washers, bolts and magnets are galvanically protected against rust, while the electrical circuits are painted with the special Multicolor PC52 varnish.

③ The pointer damping time is 1 second. The recorded values are cleared by pressing the control provided.

④ With 0.5 mm -19 mm thick panels, the screws must be attached in the fixing position nearest to the front edge of the measuring device, whereas the 20 mm - 39 mm thick panels require the screws to be fixed in the position furthest away from the front edge.

## Energy efficiency

### Front-panel analogue instruments

VLM

Available in both alternating current and direct current versions, the front-panel mono-function measurement devices come in two standard sizes, 72 mm x 72 mm and 96 mm x 96 mm (special versions available on request), employable in single-phase networks. The range is composed ammeters for a.c. and d.c. applications, and voltmeters and frequency meters for a.c. applications. Ammeters without scale for indirect connection must be completed with the appropriate scale, chosen according to the full-scale value.

## Energy efficiency

### Voltmetric and current switches

MCV

Technical features		
Insulation voltage	[V]	600
Rated thermal current	[A]	12
Mechanic operations	[No.]	1000000
Power consumption	[VA]	0.23
Modules	[No.]	3

#### MCV - MCA voltmetric and current switches

Cam rotary switches are suitable for mounting on EN 50022 rail. In three-phase systems they enable the use of a single measurement instrument (single-phase) for viewing the current or voltage value set through the switch itself.

MCA

Voltmeter switches						
Range	Power loss	Bbn	Order details		Weight	Pack
	W	7392696			1 piece	unit

#### E 233 electro-mechanical hour counters

Hour counters are used to record operating times as well as to determine idle times and off times of industrial machinery and plant, for commercial purposes or in domestic installations. No reset functionality.

### TMD temperature control units

TMD

Technical features			
Auxiliary supply	Alternating current	[V]	20÷250 ±15%
	Direct current	[Hz]	115-230-400 50-60
Power consumption		[VA]	4 max
Input	Sensor		PT100 RTD (not included)
	Type		3 wires (2 and 4 wires types are also supported)
	Error		1 degree every 0,39 Ω
	Measure range	[°C]	0...220 ± 2
	Compensation	[Ω]	20 max
	Trip delay/hysteresis	[s/°C]	5/2
Output	Number		4
	Type		NO-CO-NC
	Vmax	[V]	12 d.c.
	Imaxww	[A]	8 (resistive load)
	Functions		Alarm, trip, cooling, auto-test
	Programmable functions		Alarm, tip, hold, fan, temp. max
Display			7 segments LED
Connections	Terminals		removable screw
	Max section	[mm <sup>2</sup> ]	2.5
Insulation voltage		[V]	2500/50 Hz - 1 min
Protection degree	Front		IP52
	Rear		IP20
Operation temperature		[°C]	-10...+55, relative humidity max 90%
Storage temperature		[°C]	-25...+80
Reference			IEC EN 50081-2, IEC EN 50082-2, IEC EN 60255

#### Temperature control units

TMD are used measure and control the temperature levels and efficiency of electric machines, power transformers, motors, etc.

The temperature is measured by four PT100 type sensors. Each measuring channel has two programmable alarm thresholds which trip two output relays to remotely signal that a critical temperature has been reached.

The measured values and any alarm conditions are shown on the dual 3-digit display on the front of the device, which also has five programming keys for configuring its operation.

The control unit is also able to store in memory maximum values and a log of all trip-events.

#### CT and CTA current transformers

Used to transform primary currents (max. 6000 A) into .../5 A low secondary currents indirectly supplying power to analogue and digital measurement devices. They are available both with wound and through primary. In the first case they are provided along with the bar or the primary terminal; in the second case they have a hole to insert in the bar or the cable which forms the primary.

The rated current to the secondary windings is 5 A, in line with the offer of measuring devices. CT ..../1 are not employable with ABB mono-function and multifunction measuring devices. The use of CT ..../1 is needed in case of long wirings from CT secondary windings to the measuring device; nowadays, the wide use of communication protocols doesn't require the instrument to be installed far from the line to measure.

The new SELV versions of the CT PRO XT and CT MAX guarantee maximum safety against overvoltage and switchboard internal overheating thanks to the innovative electronic protection circuit which automatically short-circuit the CT secondary winding in case of accidental disconnection of its secondary terminals.

### CTO split core measurement current transformers

CT30

CT80

CT120

#### Split core measurement current transformers with through primary

Split core measurement current transformers are used in distribution panels or power centers for maintenance or system expansion. They can be installed easily and they allow to save a lot of time, avoiding bar disconnection. All transformers are complete with terminal caps and fastening accessories, both on bar and on wall.

### TRF M measurement modular current transformers

TRF M

#### Modular current transformers with Ø 29 mm through primary, secondary .../5A

TRF M are modular current transformers with through primary for measuring instruments. Their compact size and quick DIN rail plug allow easy installation along with great measurement precision.

## Energy efficiency

SNT current transformer for d.c. applications

SNT

Technical features		
Voltage	[mV]	60
Current rating	[A]	from 5 to 1000
Accuracy class		0.5 (from 10 to 30 °C)
Max. load	[Ω]	0.25
Overload for 5 sec.		from 10 to 500 A : 1xIn
		from 600 to 1000 A: 5xIn

### Shunts

Shunts have 60 mV voltage and must be used with a maximum load of 0.25 Ω in combination with measurement instruments in d.c.

For an appropriate operation:

- both horizontal and vertical mounting are possible (the horizontal position enables a greater heat consumption)
- the faying surface must be completely used and clean; cover with specific grease after the connection
- screws and bolts must be perfectly tight
- shunts must be sufficiently ventilated; as they are not insulated, it is a good rule to protect them against accidental contacts.

60 mV shunts
