

SP481E / SP485E

Enhanced Low Power Half-Duplex RS-485 Transceivers

Description

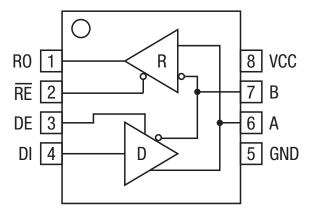

The SP481E and SP485E are a family of half-duplex transceivers that meet the specifications of RS-485 and RS-422 serial protocols with enhanced ESD performance. The ESD tolerance has been improved on these devices to over ±15kV for both Human Body Model and IEC61000-4-2 Air Discharge Method. These devices are pin-to-pin compatible with MaxLinear's SP481 and SP485 devices as well as popular industry standards. As with the original versions, the SP481E and SP485E feature Maxlinear's BiCMOS design allowing low power operation without sacrificing performance. The SP481E and SP485E meet the requirements of the RS-485 and RS-422 protocols up to 10Mbps under load. The SP481E is equipped with a low power shutdown mode.

FEATURES

- 5V only
- Low power BiCMOS
- Driver / receiver enable for multi-drop configurations
- Low power shutdown mode (SP481E)
- Enhanced ESD specifications:
- □ ±15kV Human Body Model
- □ ±15kV IEC61000-4-2 Air Discharge
- □ ±8kV IEC61000-4-2 Contact
 Discharge
- Available in RoHS compliant, lead free packaging.

Description

The SP481E and SP485E are half-duplex differential transceivers that meet the requirements of RS-485 and RS-422. Fabricated with an Maxlinear proprietary BiCMOS process, this product requires a fraction of the power of older bipolar designs.

The RS-485 standard is ideal for multi-drop applications and for long-distance interfaces. RS-485 allows up to 32 drivers and 32 receivers to be connected to a data bus, making it an ideal choice for multi-drop applications. Since the cabling can be as long as 4,000 feet, RS-485 transceivers are equipped with a wide (-7V to 12V) common mode range to accommodate ground potential differences. Because RS-485 is a differential interface, data is virtually immune to noise in the transmission line.

Drivers

The driver outputs of the SP481E and SP485E are differential outputs meeting the RS-485 and RS-422 standards. The typical voltage output swing with no load will be 0 Volts to 5 Volts. With worst case loading of 54Ω across the differential outputs, the drivers can maintain greater than 1.5V voltage levels. The drivers of the SP481E and SP485E have an enable control line which is active HIGH. A logic HIGH on DE (pin 3) will enable the differential driver outputs. A logic LOW on the DE (pin 3) will tri-state the driver outputs.

The transmitters of the SP481E and SP485E will operate up to at least 10Mbps.

Receivers

The SP481E and SP485E receivers have differential inputs with an input sensitivity as low as ± 200 mV. Input impedance of the receivers is typically $15k\Omega$ ($12k\Omega$ minimum). A wide common mode range of -7V to +12V allows for large ground potential differences between systems. The receivers of the SP481E and SP485E have a tri-state enable control pin. A logic LOW on \overline{RE} (pin 2) will enable the receiver, a logic HIGH on \overline{RE} (pin 2) will disable the receiver.

The receiver for the SP481E and SP485E will operate up to at least 10Mbps. The receiver for each of the two devices is equipped with the fail-safe feature. Fail-safe guarantees that the receiver output will be in a HIGH state when the input is left unconnected.

Shutdown Mode

The SP481E is equipped with a Shutdown mode. To enable the shutdown state, both driver and receiver must be disabled simultaneously. A logic LOW on DE (pin 3) and a Logic HIGH on $\overline{\text{RE}}$ (pin 2) will put the SP481E into Shutdown mode. In Shutdown, supply current will drop to typically $1\mu\text{A}$.

Part Number	Operating Temperature Range	Lead-Free	Package	Packaging Method
SP481ECN-L/TR	0°C to 70°C			Reel
SP481EEN-L/TR	-40°C to 85°C			Reel
SP485ECN-L	0°C to 70°C	Yes ⁽²⁾	8-pin NSOIC	Tube
SP485ECN-L/TR	0 0 10 70 0			Reel
SP485EEN-L	40°C to 95°C			Tube
SP485EEN-L/TR	-40°C to 85°C			Reel
SP485EMN-L/TR	-40°C to 125°C			Reel

NOTE:

- 1. Refer to www.exar.com/SP481E and www.exar.com/SP485E for most up-to-date Ordering Information.
- 2. Visit www.exar.com for additional information on Environmental Rating.

Revision History

Revision	Date	Description
	05/11/07	Legacy Sipex Datasheet
1.0.0	12/18/08	Convert to Exar Format. Update ordering information as a result of discontinued Lead type package options per PDN 081126-01. Remove "Top Mark" information from ordering page.
1.0.1	11/19/09	Correct table 1 error for driver output A and B outputs
1.0.2	08/08/10	Change SP485EMN-L and SP485EMN-L/TR temperature range error from +85C to +125C in ordering information section.
1.0.3	05/27/11	Remove driver minimum limits of propagation delay and Rise/Fall time. Remove SP481ECP-L and SP481EEP-L per PDN 110510-01
1.0.4	05/24/13	Correct type errors per PCN 13-0503-01
1.0.5	03/12/18	Update to MaxLinear logo. Remove GND from Differential Output Voltage min (page 2). Update format and ordering information table. Truth Tables moved to page 7 description section. Removed obsolete PDIP from absolute maximums, mechanicals and mechanical dimensions. ESD IEC61000-4-2 Contact Discharge rating added.
