

A New Direction in Mixed-Signal

SP481E / SP485E

Enhanced Low Power Half-Duplex RS-485 Transceivers

- +5V Only
- Low Power BiCMOS
- Driver / Receiver Enable for Multi-Drop configurations
- Low Power Shutdown mode (**SP481E**)
- Enhanced ESD Specifications:
 - +/-15kV Human Body Model
 - +/-15kV IEC61000-4-2 Air Discharge
- Available in RoHS Compliant, Lead Free Packaging.

SP481E and SP485E
Pinout (Top View)

DESCRIPTION

The **SP481E** and **SP485E** are a family of half-duplex transceivers that meet the specifications of RS-485 and RS-422 serial protocols with enhanced ESD performance. The ESD tolerance has been improved on these devices to over $\pm 15\text{kV}$ for both Human Body Model and IEC61000-4-2 Air Discharge Method. These devices are pin-to-pin compatible with **Exar's** SP481 and SP485 devices as well as popular industry standards. As with the original versions, the **SP481E** and **SP485E** feature **Exar's** BiCMOS design allowing low power operation without sacrificing performance. The **SP481E** and **SP485E** meet the requirements of the RS-485 and RS-422 protocols up to 10Mbps under load. The **SP481E** is equipped with a low power shutdown mode.

SP481E and SP485E

ABSOLUTE MAXIMUM RATINGS

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections of the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

V_{CC}+7V

Input Voltages

Logic.....-0.3V to ($V_{CC} + 0.5V$)

Drivers.....-0.3V to ($V_{CC} + 0.5V$)

Receivers.....+/-15V

Output Voltages

Logic.....-0.3V to ($V_{CC} + 0.5V$)

Drivers.....+/-15V

Receivers.....-0.3V to ($V_{CC} + 0.5V$)

Storage Temperature.....-65°C to +150°C

Power Dissipation

8-pin NSOIC.....550mW
(derate 6.60mW/°C above +70°C)

8-pin PDIP.....1000mW

The **SP481E** and **SP485E** are half-duplex differential transceivers that meet the requirements of RS-485 and RS-422. Fabricated with an **Exar** proprietary BiCMOS process, this product requires a fraction of the power of older bipolar designs.

The RS-485 standard is ideal for multi-drop applications and for long-distance interfaces. RS-485 allows up to 32 drivers and 32 receivers to be connected to a data bus, making it an ideal choice for multi-drop applications. Since the cabling can be as long as 4,000 feet, RS-485 transceivers are equipped with a wide (-7V to +12V) common mode range to accommodate ground potential differences. Because RS-485 is a differential interface, data is virtually immune to noise in the transmission line.

Drivers

The driver outputs of the **SP481E** and **SP485E** are differential outputs meeting the RS-485 and RS-422 standards. The typical voltage output swing with no load will be 0 Volts to +5 Volts. With worst case loading of 54Ω across the differential outputs, the drivers can maintain greater than 1.5V voltage levels. The drivers of the **SP481E** and **SP485E** have an enable control line which is active HIGH. A logic HIGH on DE (pin 3) will enable the differential driver outputs. A logic LOW on the DE(pin 3) will tri-state the driver outputs.

The transmitters of the **SP481E** and **SP485E** will operate up to at least 10Mbps.

Receivers

The **SP481E** and **SP485E** receivers have differential inputs with an input sensitivity as low as ±200mV. Input impedance of the receivers is typically 15kΩ (12kΩ minimum). A wide common mode range of -7V to +12V allows for large ground potential differences between systems. The receivers of the **SP481E** and **SP485E** have a tri-state enable control pin. A logic LOW on \overline{RE} (pin 2) will enable the receiver, a logic HIGH on \overline{RE} (pin 2) will disable the receiver.

The receiver for the **SP481E** and **SP485E** will operate up to at least 10Mbps. The receiver for each of the two devices is equipped with the fail-safe feature. Fail-safe guarantees that the receiver output will be in a HIGH state when the input is left unconnected.

Shutdown Mode SP481E

The **SP481E** is equipped with a Shutdown mode. TO enable the shutdown state, both driver and receiver must be disabled simultaneously. A logic LOW on DE (pin 3) and a Logic HIGH on \overline{RE} (pin 2) will put the **SP481E** into Shutdown mode. In Shutdown, supply current will drop to typically 1μA.
